*«To understand what is a mania we must establish first what is the norm».*

## PREFACE

Is very sad that today everybody, even people over medium level, looking an esotic illustration can feel an unconscious sense of sin and a morbid curiosity.

The freedom of this sin cure the individual from that neurosis which the curiosity breakdown on the contrary, ever, all the connoisseur of modern and ancient art, appreciate the erotic sculpture, pictures, engravings from India, Africa, Egypt, ecc., ecc.

Only a highly-civilized public, «Free from psychic Problem» can appreciate the drawings of this artist (DE ANDREIS) that with courage enter in the mined field of depravation where the erotism digress in mania, schizophrenia, or most of the time in madness!

These pictures can appear to a profane as a vulgar erotism, but readed in the correct way, show as the sexual act is an animal act only when is faraway from creativity sublimation, art, philosophy and public spirit.

Is that right to have false modesty in science?

The dogma: «Beautiful in the art, the truth in science» steel valid. The darkness is not belong to the art.

~~ALL HUMAN BEAN BELONG TO SCIENCE!~~

## **BILIOGRAPHY**

For all photos, captions, writings and all pages from different Authors see the following bibliography.

Italian Medical Encyclopedia S.E.S.  
Medicine Encyclopedia Rizzoli La Rousse  
Medical Psichiatric Encyclopedia.

\*\*\*\*\*

N.B.: The drawings have been already published on the volume «MANIE SESSUALI» for Dialoghi Club Edition as work of art of G.B. de Andreis and Mr. Nicholson.

## **I I**

### **PSYCHOPATHY**

The psychopathy is the equivalent of personality troubles with social and legal implication. Psychopatic is the individual that is not the only one to suffer, but is harmful to others and the society. The characteristic of psychopathy is the chronicity and stability to not reach an adequate social-cultural integrity with ethical and social disobey. It can show up in childhood (temperament children), can last all life, sometimes attenuates with age.

Definily, is a different personality for this conviction, emotional reaction, behaviour and a very difficult existence adaptation. So is life will be very difficult with others or impossible.

We can number the personality troubles:

- 1) HYPERTHYMIC (hyperaction associate with euphoric condition)
- 2) DEPRESSED, HYPOTHYMIC
- 3) UNSTEADY
- 4) HISTRIONICS
- 5) IRRITABLES
- 6) PSYCHASTHENE
- 7) CHRONIC NEURASTHENIC

### **I I I**

For PSICHOPATHY we can understand the most restrictive pathological form in moralsense in wich emerge on arid affection, indifference and averstrone against others, inability to assume a social position or responsability without respect for himself, against people and laws!!!

The subject does not feel any sin, remorse, he want the immediate satisfaction of his needs, careless of damages can happen to others or himself: in this category we can have misanthropes; or social delinquents, habitual criminal, prostitutes, sexual perverts, sadist. In these abnormal persons we include ethylist and toxicomanias. In all these persons there is an affection lack where the individual prevail on social.

For some psychopathics there are genetic causes, PRE-PERIPOST natal, as cerebropathy, endocrine abnormalithy, somatic damages, backwardness.

We can date basic the psichopathy in childhood age experiences, with social on families influence and porsonality maturation arrest of the subject. In all these cases the therapeutic treatment is useless!

## IV

### MORFOLOGICAL APPARITION OF SEX AND LOVE (from Plato's Symposium)

In «SYMPOSIUM» perhaps the best eros lyric of ever, written by the greek PLATO, we have the celebrated myth of human origin and concomitant apparition of «sex and love»

In the beginning before men and women there were perfect creatures because sharing the double nature of men and women.

But they were not only androgen being, as we can suppose, but real double masculine and feminine being.

These primordial creatures feel so perfect to consider themselves as gods.

The presumptuousness become arrogance, they try to climb to heaven.

So ZEUS punishes them: cuts them in two, the male and female. These two halves are eternally condemned to look for each other with an invane hope to become again perfect creatures as before.

With this cut we have the human being division in two sexes, at the same time, the nostalgic union aspiration that we call «eros» or «love».

**PSYCHOSIS** (folie, insanity): a psychotic person is not aware of his personality disorder.

**NEUROSIS**: while who suffer of neurosis realize his pathological character disorders.

### PSYCHOTROPE DRUGS

An elective action drug that works on the central nervous system, used on mental disorder.

Sickness without care till few years ago.

With these psychotrope drug is more easy to recover insane persons to a social life.

Above all has been established a more confident care to psychosis.

Psychotrope drug classification his based upon sedative action or character stimulant

- A) PSICHOELEPTICS
  - a) HYPNOTICS
  - b) NEUROELEPTICS
  - b) ANXIOLYTICS

- PSYCHOTROPE DRUG: B) PSYCHOANALYTICS
  - I) PSYCHOGOGICS
  - II) ANDIDEPRESSANTS OR THYMOLYTICS

- C) PSYCHODYSLEPTICS OR PSYCHOSOMIMETICS

## **VI**

### **1. PSYCHOELEPTICS**

These depress the nervous system, causing delay on mental activity, vivacity, reduction, sometimes sleepiness.

a) IPNOTICS: mainly acting on sleep as BARBITURATES

b) NEUROLEPTICS:

(Phenothiazine, Reserpine, Butyrophenone) these produce psychomotor inhibition, reduce psychotic manifestation (Allucination, a perception without subject believed real from patient), or delirium (mental confusion and alteration) with hallucination and motory agitation; tone discomfort, sometimes with extrapyramidal effect; tone modification and regulation of unintentionals and automatics movements, like Parkinson syndrome, chorea.

c) ANXIOLITICS:

or usually called tranquilizers or minor tranquilisers, these have a sedative action on the anxiety, with mild influence on psychotics process.

## **VI**

### **2. PSYCHOANALITICS**

With double effect, increasing the intellectual care and liveliness, and raising mood tone.

#### **I PSYCHOGOGICS**

ad AMPHETAMINE, drugs with stimulant actions on intellectual care and liveliness.

#### **II ANTIDEPRESSANT:**

- . mainly relieving depressions, especially psychotics, including antidepressant (imipramine hydrochlorine derivatives).

In this group we have anti-MAO that are the MONOAMINE-OXIDASE inhibitors with a very antidepressant effect, these exceed the temporary euphoric effect and simple stimulation.

### **2. PSYCHODYSLEPTICS**

These drugs can alter the normal psychic functions, can produce model psychosis. With hallucinogenic properties, mildly stimulating, inducing deep alteration in the personality.

## VIII

### SEXUAL PERVERSIONS

- 1) All those sexual behaving that are considerable differents from the usual.
  - 2) PERVERSION from latin «perversus» past of verb «pervertere» abonormal behaviour (especialy in sexual sphere) socially condemned.
  - 3) Abonormal sexual behaviour that substitutes the normal psysiological and psychological sexuality manifestation. In these concordant definitions we must consider the subject age, although same sexual behaviors in the development, considered normal (as in the childhood) can become perverse if persist in time or in adult life.
- THE PERVERSE PERSON GOES TO DOCTOR BECAUSE THERE IS A LEGAL VIOLATION OR PUSHED BY FAMILY SHAME.
- The diagnostic setting is very difficult:

## **I X**

It can be the organic affection symptom as mental weakness endocrine affections of sexual glands or adrenals or some psychosis: schizophrenia, manias, chronic delirium, demential or epilectic syndrome.

We can place it as psychopathic behaviour associated with personality trouble (intrinsic amorality).

In some other situations the sexual perversion can be a temporary behaviour suggested by situational needs (as isolation of sea man, religious and prisoner) unrelated to subject personality, who become normal as soon has a chance.

ACCORDING TO PSYCHANALYSIS THE SEXUAL PERVERSION CAN BE A RETARDATION, A BLOCKAGE, AN ALTERATION OR EVEN A STOPPAGE OF THE NORMAL SEXUAL MATURATION, SO THESE VARIOUS PERVERSIONS REPRESENT LIBIDINAL BENT OF CHILDLIKE TYPE.

X

Certainly background educational custome, negatively lived with parents, or religious, suffered in childlike and adolescence experiences, contribute to lead inferiority and blame feelings.

Is very difficult to establish a classification of sexual perversion because different behaviours can coexist in the same person (sado-masochist) we try to distinguish more groups:

FIRST: were an abnormal subject for a sexual intercourse. In this category we can have:

a) Paedophilia (from greek pais, paidos):

**HOMOSEXUAL EROTIC ATTRACTIONS FREQUENTLY TOWARDS CHILDREN OR YOUTHS.**

b) Male homosexuality (paederasty: paiderastes: pais-paidoserastes) (lover-eran: to love): looking ,for same sex partner.

c) Female homosexuality: lesbianism; from Lesbos island or sapphism from the greek poetess Sappho wich homosexual tendency was always looking for same sex partner.

## **X I**

- d) Transvestim: or eonism (from french 18th country knight d'EON affected from this deviation) an irresistible tendency to wear other sex clothings, even keeping their masculine of feminine role.
- e) Zoophilia: (from greek zoo: animal; philia: love) perverse sexual attraction to animals (bestialism).
- f) Necrophilia: from greek: nekros (dead) and philia: (love); sexual attraction to deads.
- g) Fetishism: sexual impulse direct to a body part or an object.
- h) Coprophilia: from greek kopros (dung) and philia (love); sexual morbid excitation seeing or smelling dungs.
- i) Masturbation: (latin masturbari-manus) also called onanism from ONAN punished by God because was spreading semen (sperm).

## X I I

SECOND: in this case is not an abnormal object chosen by the perverse but the intercourse manner:

- 1) Scotophilia: seeking and pleasure satisfaction looking someone else nakedness.
- 2) Exhibitionism: obsessive, morbid, deliberate exposition of sexual organs.
- 3) Sadism: tendency to combine sexual satisfaction with material or moral pains to the partner.
- 4) Masochism: from the name of the novelist L. Von Sacher-Masoch, author of novels whose characters were affected of this perversion: sexual anomaly in which the pleasure is reached through physical violence or bodily pains, inflicted by themselves on their own body or from other person.

THIRD: in this case the sexual activity happens in a quantitatively anomalous way:

- 1) Impotency: individual adult inability to make intercourse (impotentiae coeundi) or to procreate (impotentiae generandi).

### **X I I I**

- II) Precocious ejaculation.
- III) Dyspareunia: women's painful and difficult sexual intercourse, due to vaginismus or perineal musculature contraction or vaginal anal spasm or a particularly rigid hymen or for pelvic pathology.
- IV) Frigidity: sexual desire lack and enjoyment during intercourse.
- V) Satyriasis: man exaggerated sexual desire.
- VI) Nymphomania: woman exaggerated sexual desire.

THE SEXUAL PERVERSIONS AETIOLOGY IS UNKNOWN MANY THEORIES  
... GENETIC ... HEREDITARY ... ENDOCRINE ...

Difficult and irresolute therapeutic treatment.

To calm down tension or anxiety psychotrope drugs can be recommended (neuroleptic or tranquilizer). Others therapeutic attempts are the hypnosis (greek hypnos = sleep): sleep or sleepiness condition artificially caused, characterized by a remarkable suggestibility increase to person who caused that. PSYCHOTHERAPY: mental discomfort therapy by psychological technics between physician and patient.

## XIV

### GIOVANBATTISTA DE ANDREIS

Born in Baldalucco (Imperia province) on 1938.

Painter, engraver.

On 1976 his story: «Faustina l'inviolata» after published by Play Boy.

On 1981 the Dialoghi-Club Gallery of Biella presents 80 erotic drawings.

Contemporaneous artist.

On 1982 comes out his monographic volume «Il nero e il vento».

On 1983 the Benevento Sannio's Museum present «The Witches» drawings and engravers on Magic.

## **MASTURBATION OR ONANISM**

(MASTURBER ... TO MASTURBATE ... SICH BEFLEKEN ...)

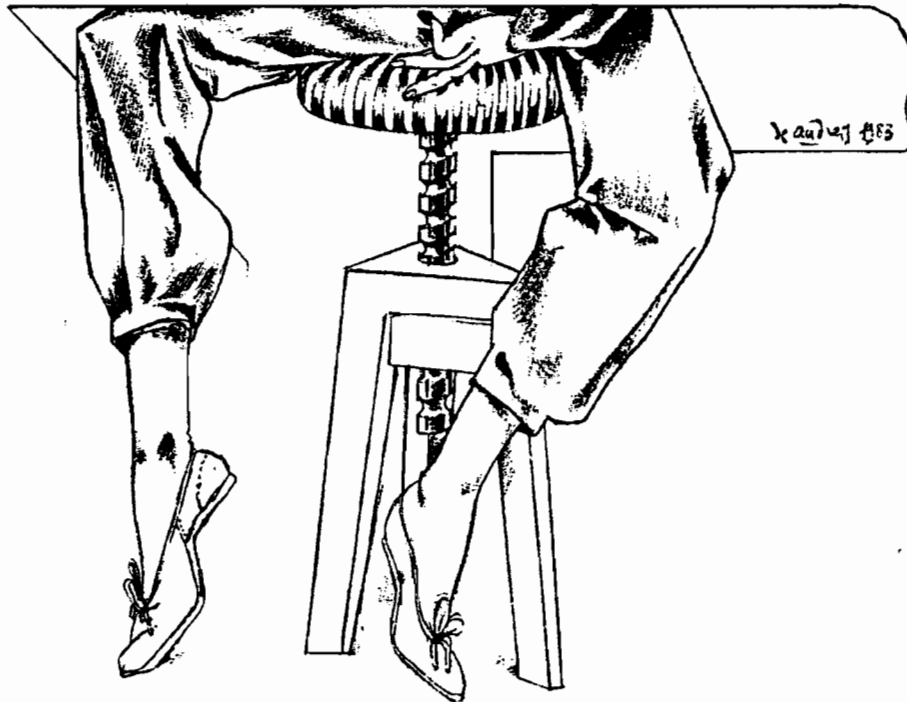

To masturbate: (from, to masturbate with hand, to pollute that is to get sexual pleasure with the hand in both sexes, in other words is the act or vice to obtain erotic orgasm without normal intercourse.

## **AUTOEROTISM**

It can be present and practiced in childhood even without ejaculation. Also genital inflammation can stimulate in the children masturbation, said also ONANISM.

A lot frequent in adolescence: 96% on male, 60% on female.

It is not a pathological behaviour, but it must be considered as that if it is accompanied by conflictual feelings of blame.

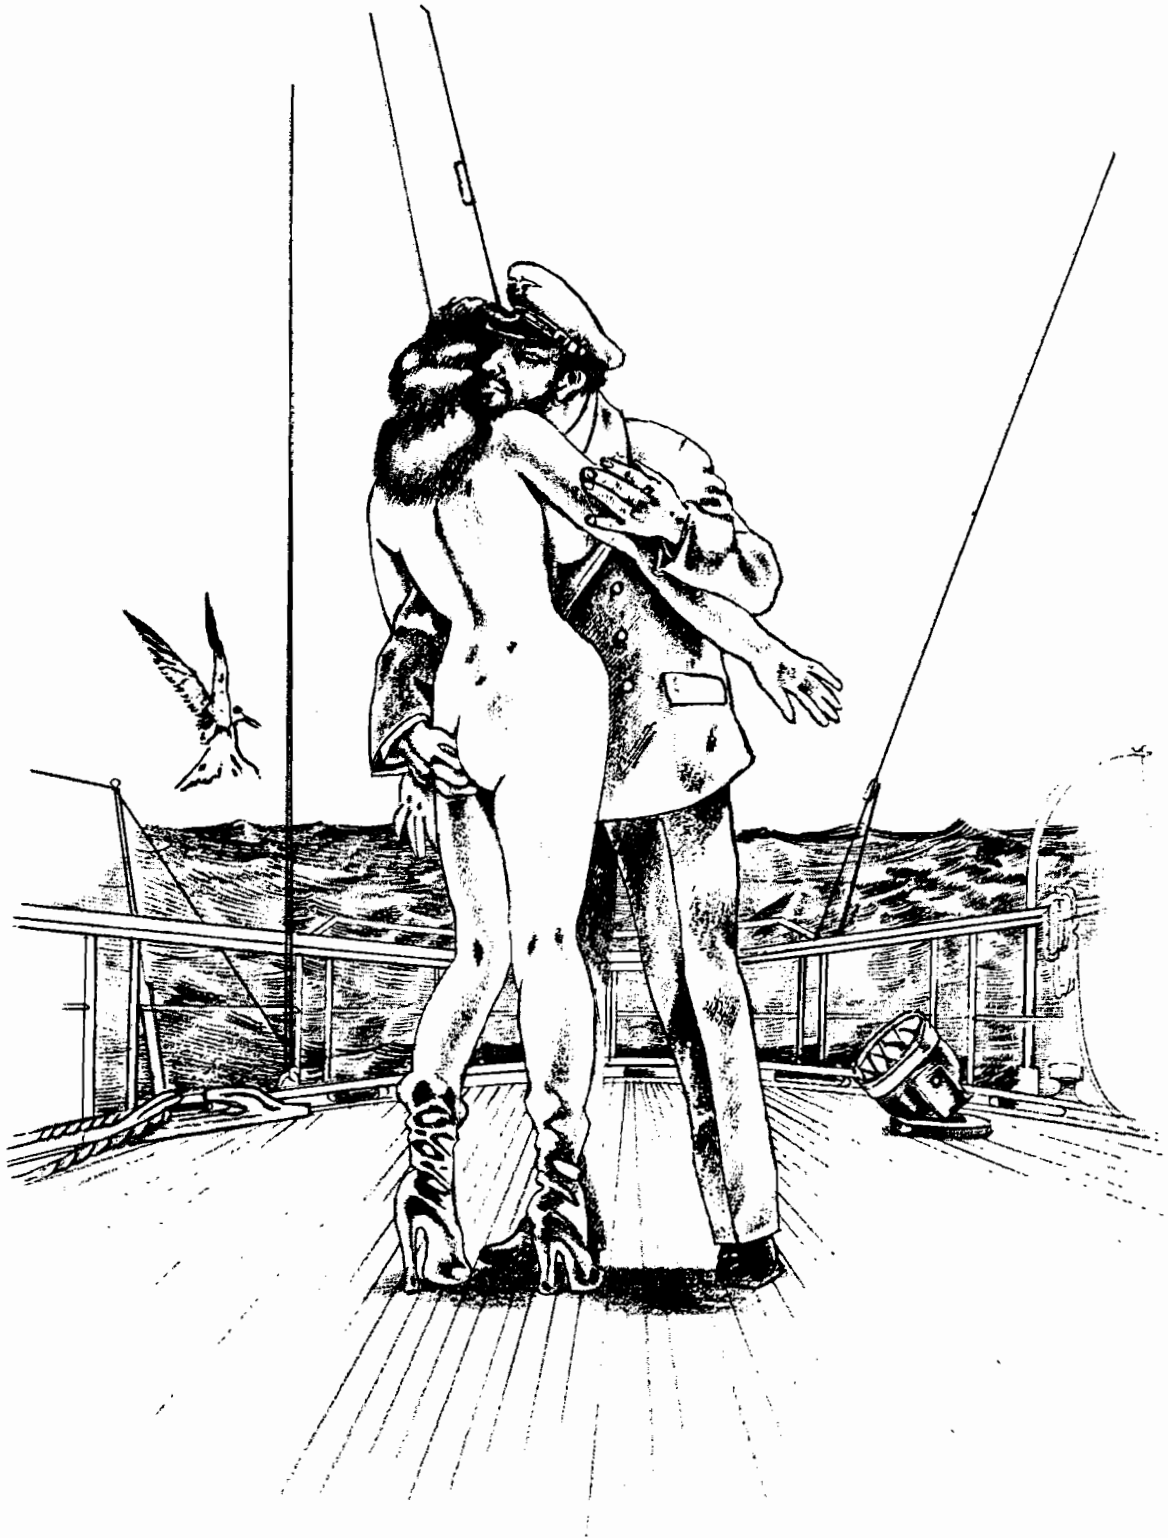

## FANTASTIC MASTURBATION

From very old times we had this traumatic frustrated conditions especially the sailor-man that where using the so called «Captain's Doll». The modern rubber doll.

This is the cause in most of the cases, of posthumus violence suffered from real women.

So this maniac, taken to sexual impotence, find his wake-up only with the passivity calm of the object. So he satisfied all his intimate desires.

## ZOOPHILIA OR BESTIALISM

The man-goat-sheep relation is known from very old times, when was used to accompany soldiers with a lover-goat.

An old saw «an horde, an invader's band who used violence to goats an children».

Also happened that some mountain-dwellers fall in love with these animals till the absurd slaughtering for jealousy.

An ambient modification can cure this perversion.

According to kinsey happen on 17% of youth living in isolated farms and 6% of totale population.

Others than cats and dogs the preferred are horses, donkeys (feline cunnilinctio, canine licking and coitus).

It is not unusual an intercourse pig-woman (a corkscrew form penis long till 60 cm).

## CHASTITY BELT

This sadic invention that dates back in the Middle Ages, was builded as a metal belt with two small holes the front for the vulva and the back one for the anus; with this type of instrument, che jealous maniac man was preventing the introduction of man's organ also because these two holes were protected in the outside with a sort of metal teeth.

This form of perversion furtunately is not in use today.

## DRUGS

The traditional meaning in that all extracted substances, pure or mix with others, should have medicinal properties or as simple spice for foods (pepper, cinnamon ...)

In the negative language we intend all natural or synthetic substance that assumed for voluptuousness, in variable periods, cause an uncontrollable desire to try it again and causing bad psychic level modification.

The cocaineist, recognized from ulcerated septum, find in this type of drugs cerebral, physic, sexual satisfaction followed by a deep depressant situation, sexual impotence, hallucination, perversions, suicide, that is the tragic epilogue of abstinence crisis.

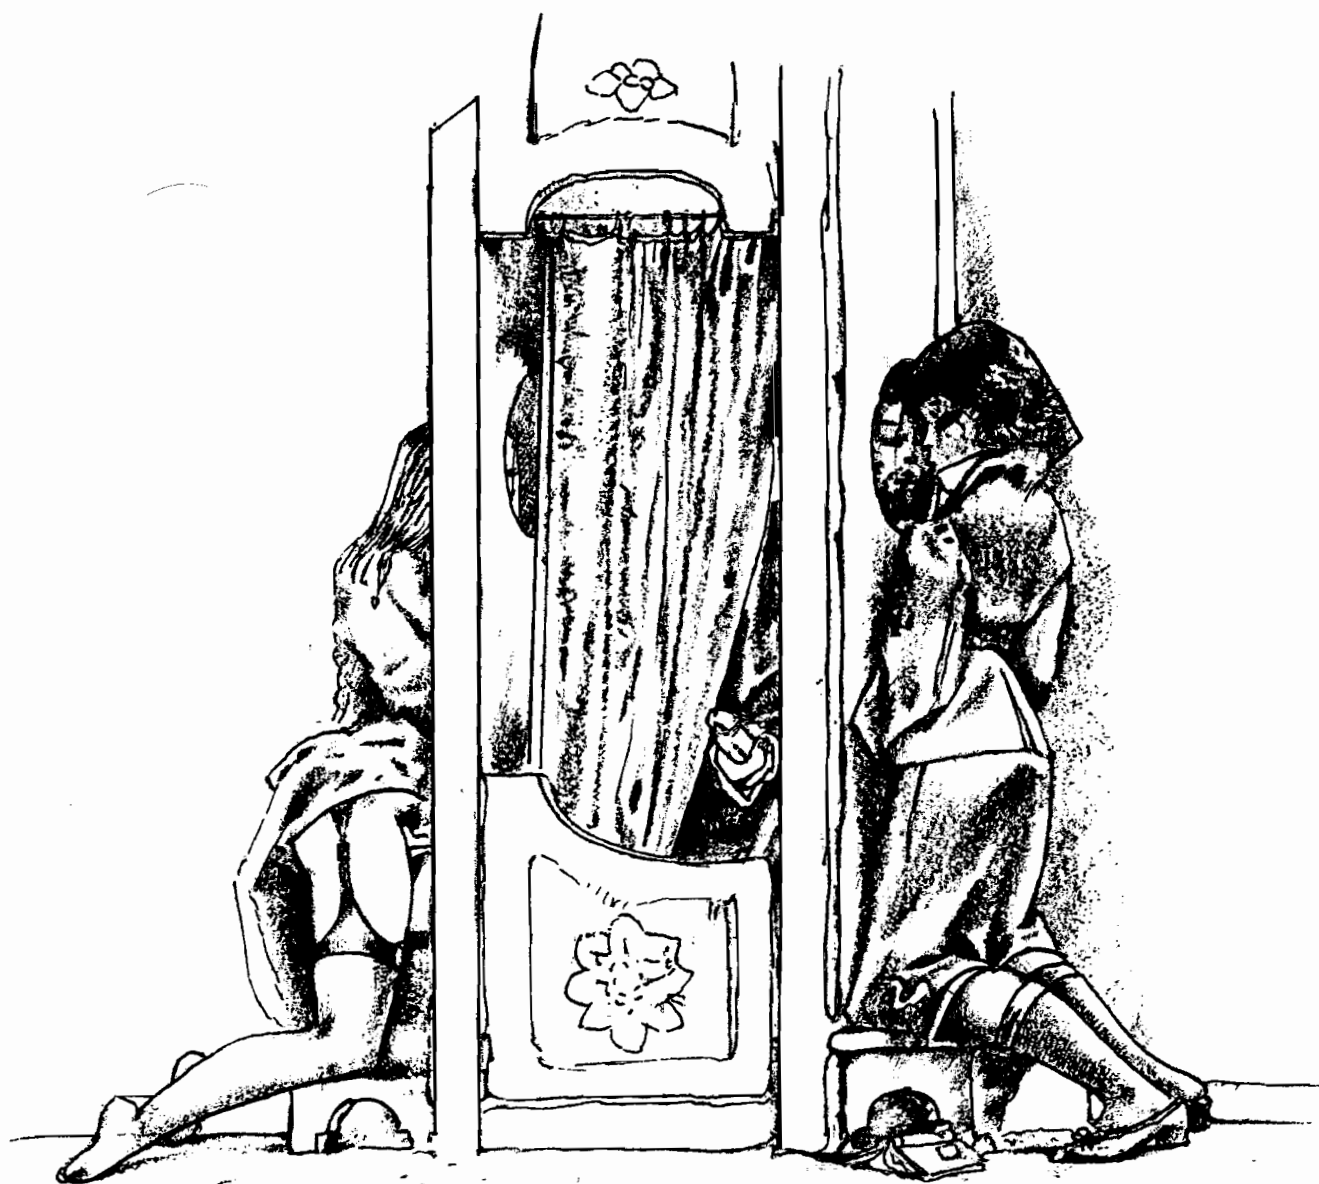

## RELIGIOUS MANIAS

These perverse forms are looking for a sublime religious auto-excitation.

This is a typically feminine frustration, because give to tell to the confessor (male), imaginary libidinous and erotic acts.

Is well-known the love that can began in the confessional between the priest and sinners.

The «ero-atheism» is a widespread mania that find its origin from a sentimental blackmail imposed by the church to who does not follow ist law, scared for what can happen in live to come.

## **COPROPHAGIA**

(Determined ingestion of excrement)

Serious regressive behavioural manner in subnormal or psychotic children.

Sometime also in schizophrenic adults.

The perverse form, called COPROLAGNIA, very unusual mania, consist to look at the anal hole dilatation during defecation; and get dirty with excrement.

The coprophagous get excited smelling excrement, breaking wind, urine.

The orgasm by anal and ureteral erotism is called «amphimixis».

Seems that Gabriele D'Annunzio was suffering of this mania.

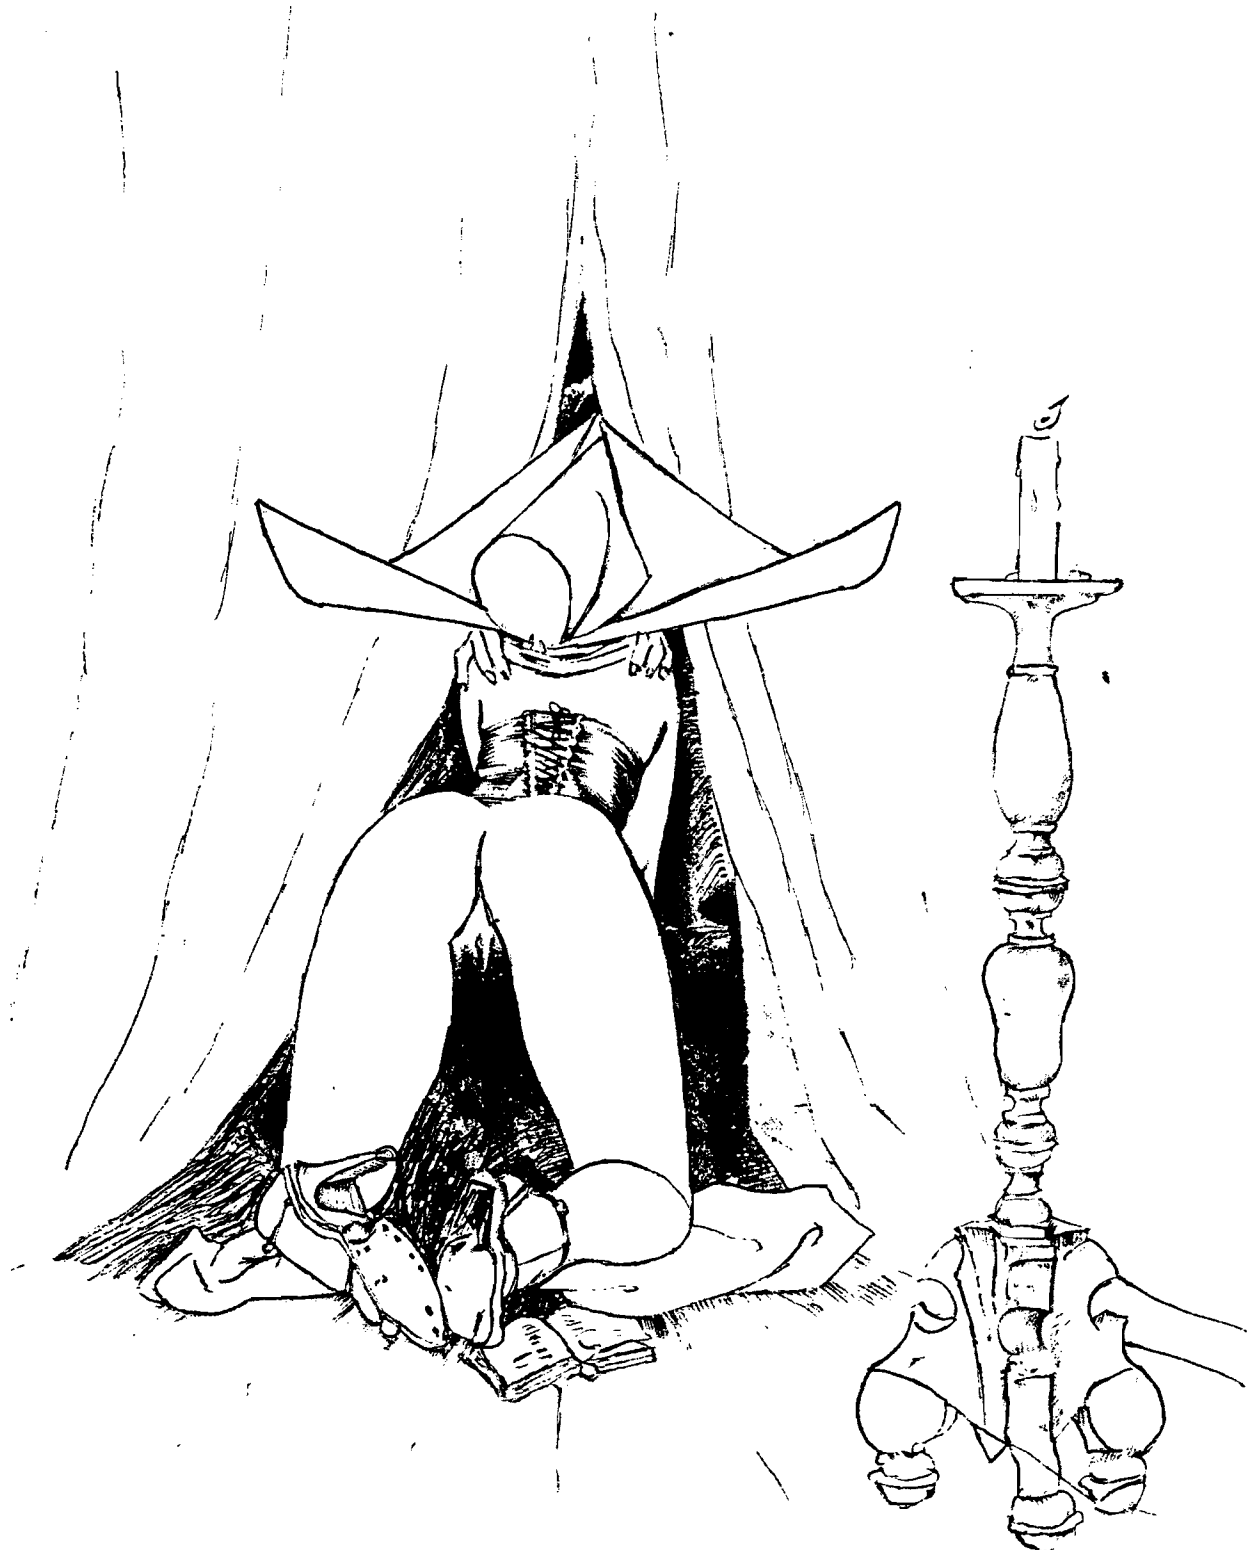

## RELIGIOUS FANTASY

The atheist, the antichrist rebels against one of the principal rule of catholic doctrine that says «every sexual activities that are beyond married intercourse intended to procreate, is sin».

So the religious maniac get excited if he can disobey the Christ laws, using violence on priests and nuns or desecrate holy place as churches, convents or sacred images.

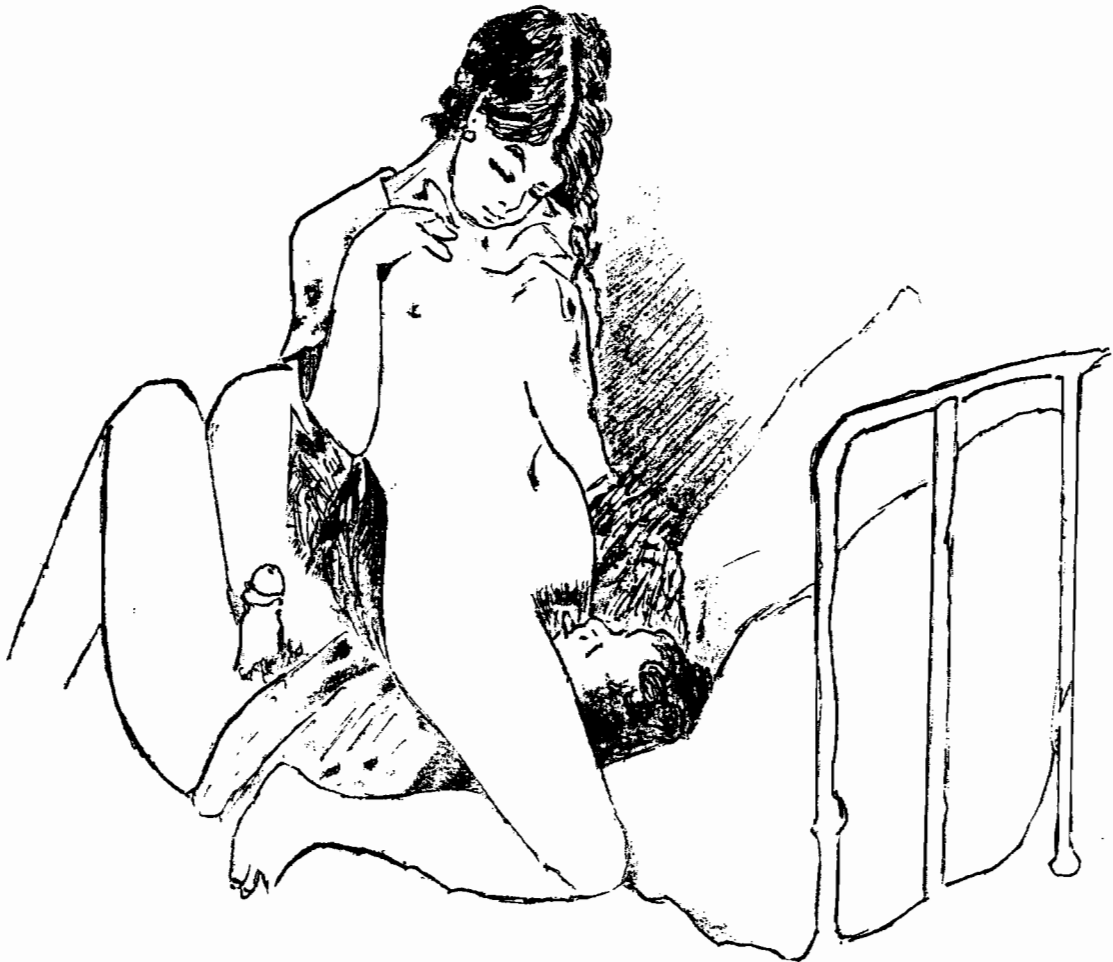

## **CUNNILINCTION**

(To introduce the tongue)

Widespread sexual practice.

For the man the vaginal secretions small of marine humour, the vulva a shell like, contribute to complete the poetic illusion, so the partner possession is total till to give a moribund autoexcitement.

The cumilinctio, for the lesbian, because of penis lack, is an indispensable methodology.

## **DEFLORATOR**

(Deflowering mania)

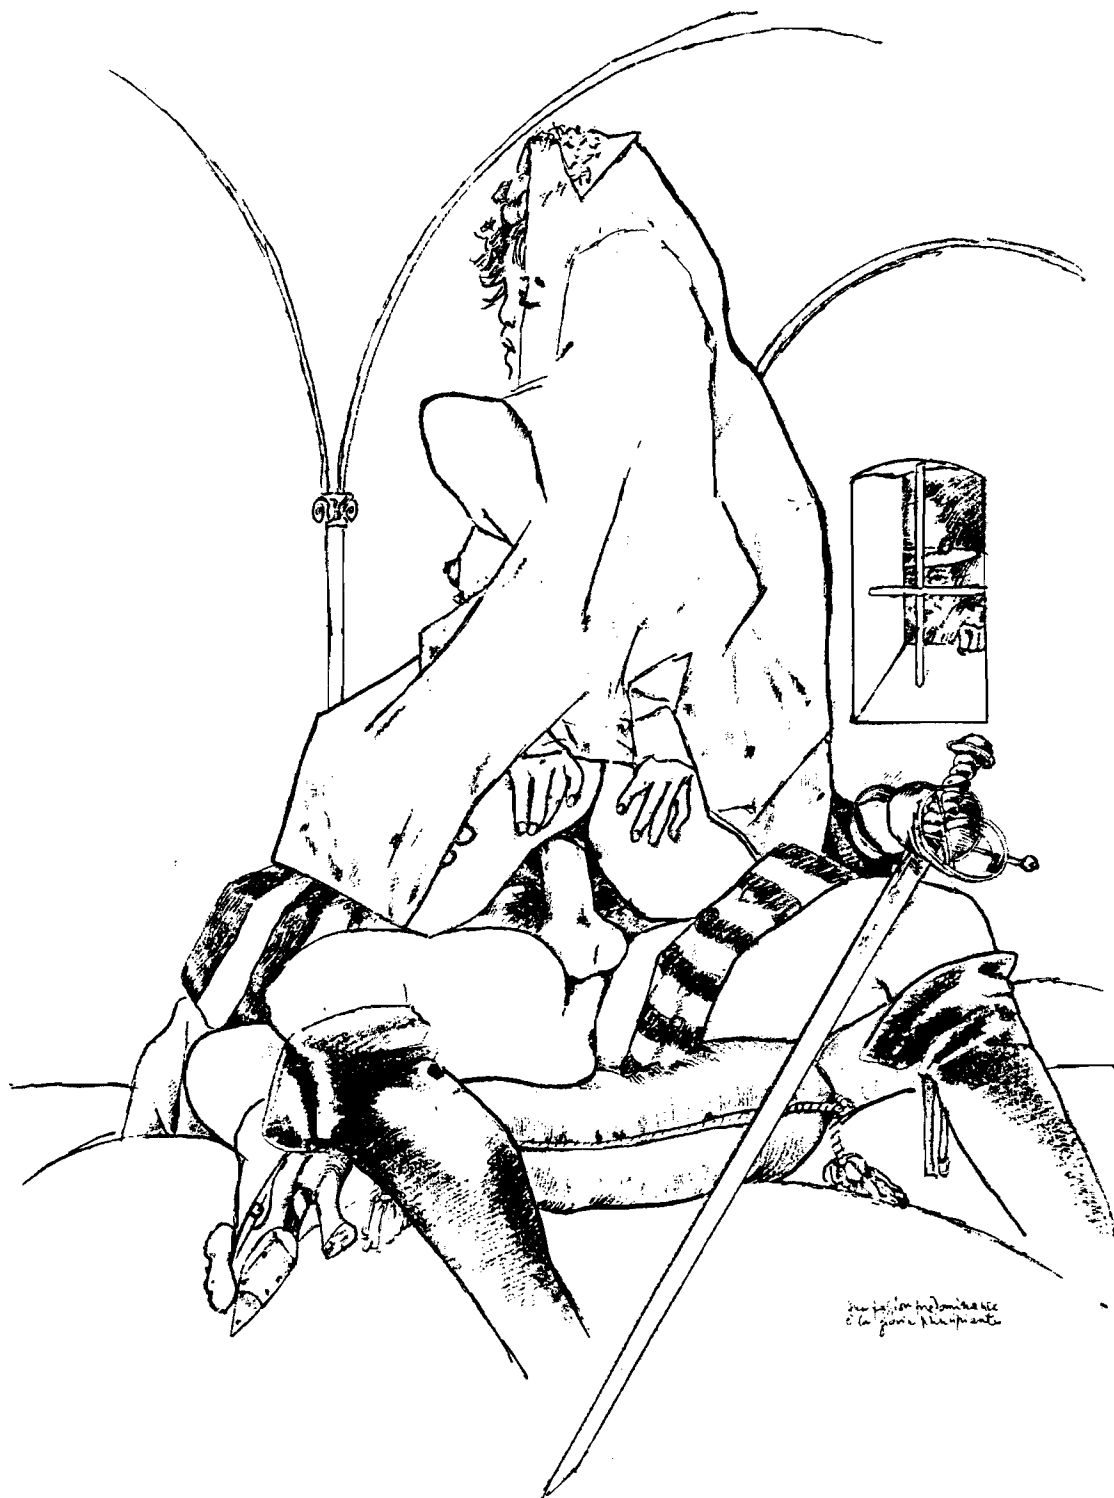

For this person:

«his predominant passion is the young beginner».

In old age «ius primae noctis» was exclusive night of the country gentleman.

This old custom was justified from bride grudge lack to husband for pains suffered during hymen breaking (deflowering).

Everiday rapist and deflorators are guilty of violence excess, till to commit crime.

## DIABOLIC MANIAS

Devil; damned spirit, rebel angel throw down from heaven to hell, always represented from popular fantasy with big long hornes, hook-shaped wings, demon: absolute symbol of perversion.

Believers enemy and friend of unscrupulous libertine.

Sexually imagined from common people as super-virile and for his double member perverse nature: a big one to introduce in the vulva and the other one small and long to introduce in the anus.

Some perverse person are inspired from this demoniac image to organize or create macabre situations because attracted from everything that is lascivious, by blood, by death.

Other instead dream about sexual relations with imaginary characters as devils, vampires, witches ...

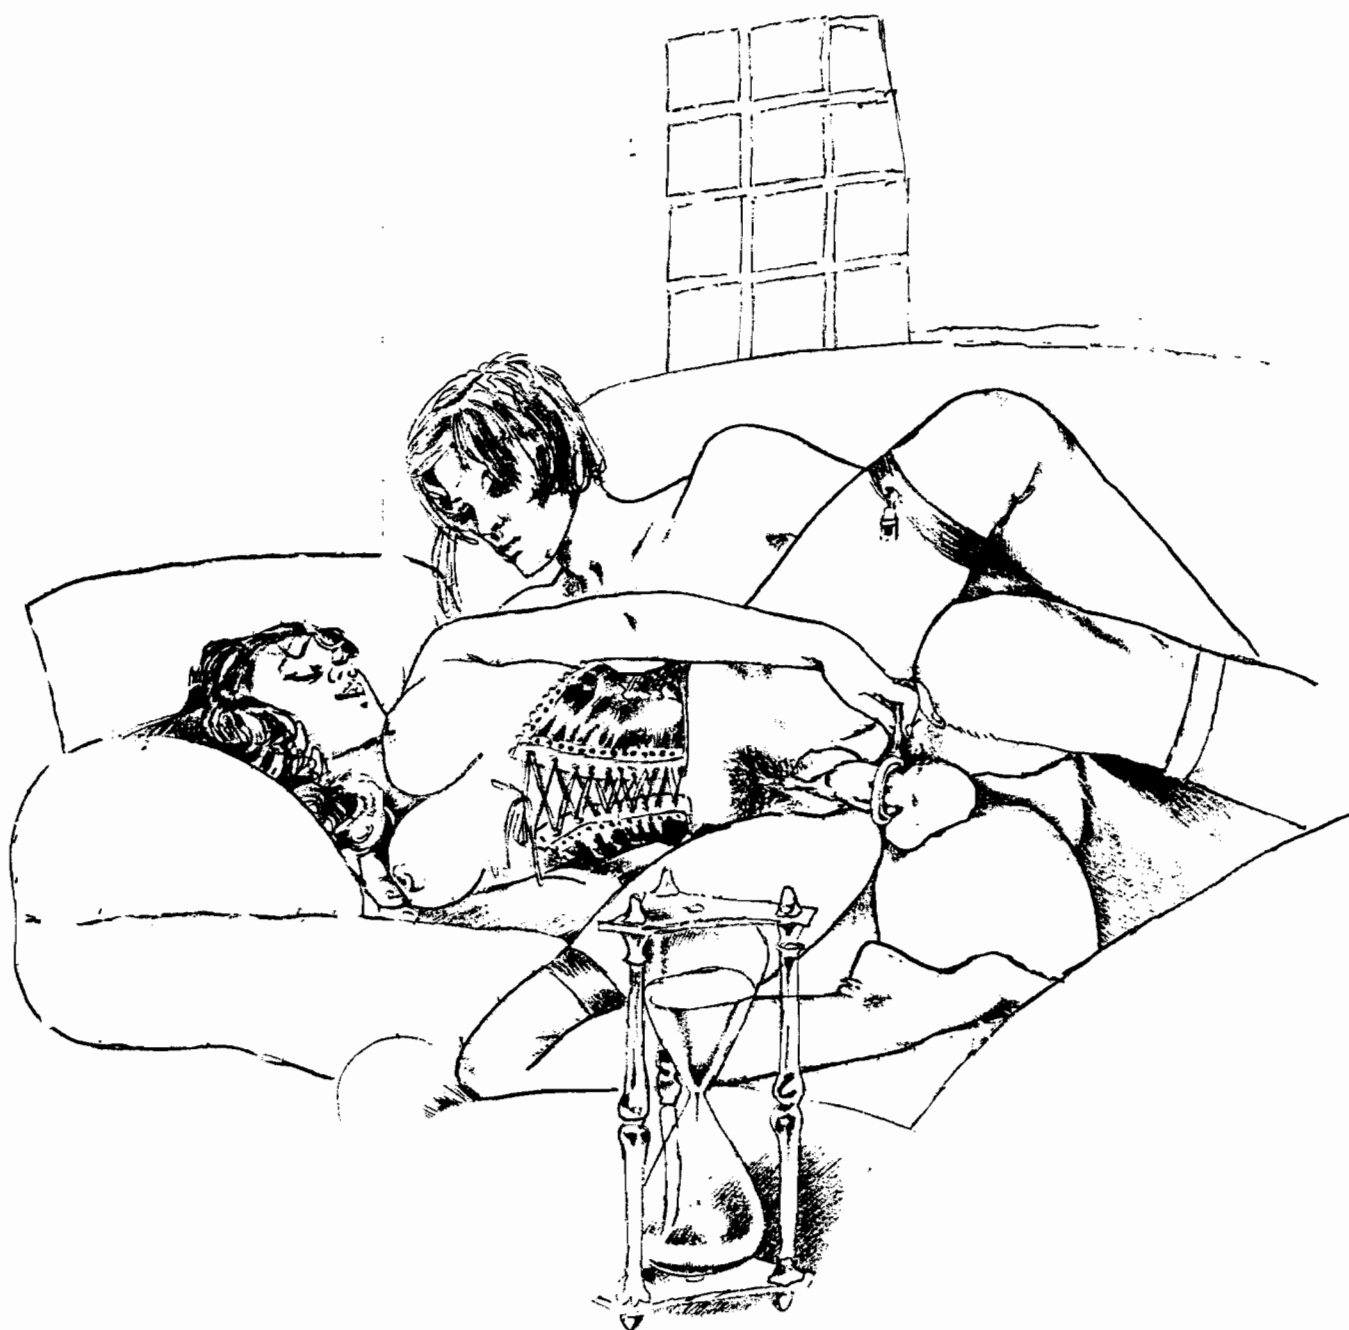

## PRECOCIOUS EJACULATION

This is the neurotics inability to control their sexual excitation followed by a rapid ejaculation. In the serious cases it can happen before any phisical partner's contact, sometimes even during love game, other times, prematurely, during intercourse. This is the most common masculine sexual inconvenience fuctions.

According to some investigations 75% of males ejaculate only two minutes after penis introduction in the vagina. This is a couple problem, not only for male partner.

Anticipated anxiety can be at the base of this problem. To defend himself from this weakness the man has invented a lot systems as topic cream, the maniac, instead, can arrive to introduce extraneous bodies in the urethra till complete obstruction of it, or tie up with string or elastic cord the seminal duct (canal).

**ONANISM OR URINARY  
MASTURBATION**

The miction necessity cause in the female person a clitoris swell up.

That's enough for the perverse person to favour the masturbation on a spontaneous organs.

In the adult person became a neurotic symptom.

## MASTURBATION OR ONANISM

Is old as the world. Has been described by all people, and we have reference in the most remote scriptures.

This auto-erotic activity that involve the manipulation and stimulation of their own genitals to obtain sexual pleasure, was practised by DIOGENE and his disciples in Athens places (V sec. a.C.). A lot of sexologist describe it as «THE MOST SUBLIME EROTIC ACT PRATICED IN LONELINESS».

BROWN SE-SEQUARD (french physiologist and phisician, university professor) recommended it as the most complete and free coitus act; a fantastic intercourse with everybody, without any inhibition, till get to a total sublimation.

For St. Thomas Aquinas this was a serious sin.

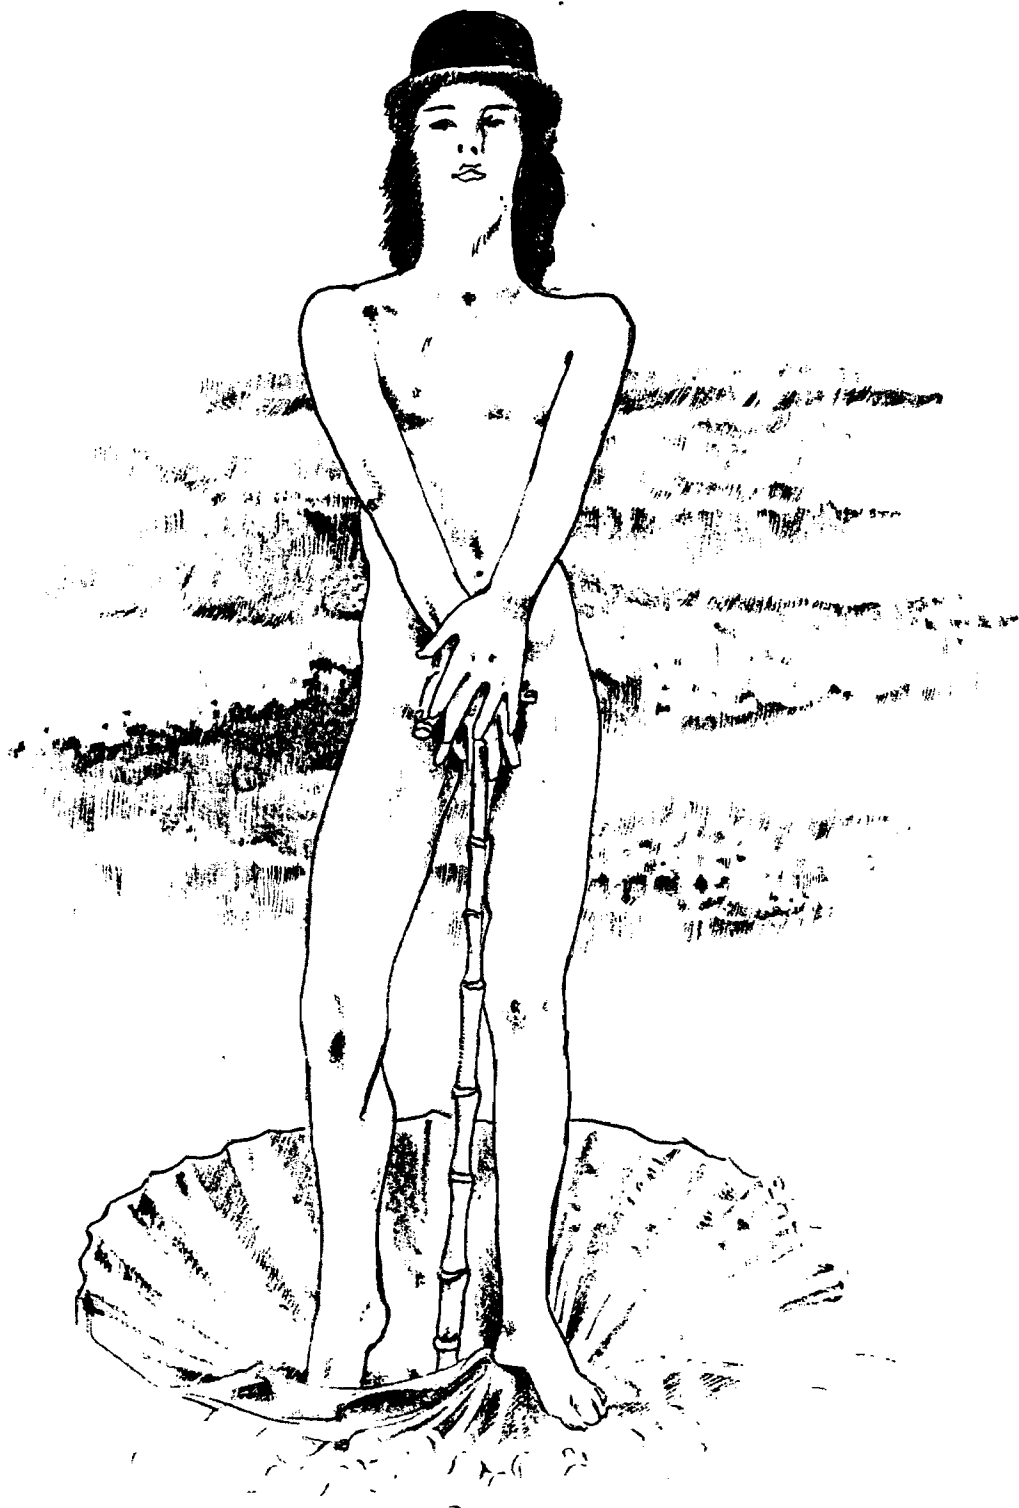

## MALE HOMOSEXUALITY OR PAEDERASTY

We must distinguish those manifestations caused and favoured in special situations (as for example the absence of heterosexual persons).

So we can consider only casual homosexuality for those who live in male community (as prisoners, religious, etc.), in fact these persons out of this background become normal heterosexuals.

We must also distinguish from homosexuality the organic or congenital cerebropathym these are part of psychopathology of mind-ill; either the homosexuals are not in the hermaphroditic category; either in the pseudohermaphroditism where instead we have a congenital anomaly of sexual organs; either in the endocrine alteration of secondary sexual characters (masculinization, effemination).

## EXHIBITIONISM

Can be considered as heterosexual perversion only for men, the characteristic is to show genitals to a woman, particularly if is very young, with the intent to strike surprise, terror or disgust.

The exhibitionist normally is not a seducer either a violent because very often is himself impotent.

Normally the exhibition is followed by masturbation.

This spectacular complex is a phobia of obsessive erotic excitation in public place.

This patient is unable to perform a normal intercourse with a woman.

These exhibitionistic behaviours are often repetitive so are punishable by the law.

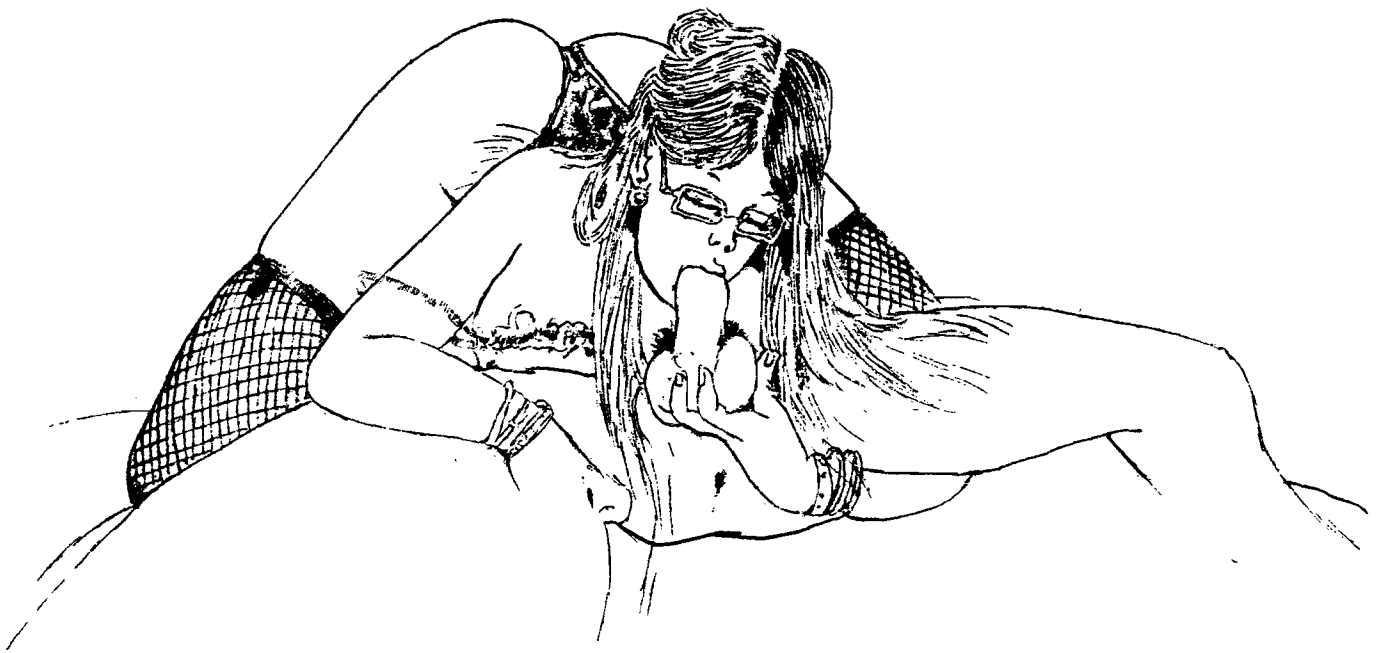

## FELLATIO

(Oral stimulation of male organ)

This well-known mania practiced since ancient times (fellatio or «coitus ab ore» for the romans), can involve lesion risk for penis or mouth.

The introduction of penis in the woman month is called also «pump» or «oral coitus»; till to reach complete orgasm and fill the month with seminal liquid (sperm) followed by swallowing.

This erotic practice, once, was recommended by wrong moral principles to keep virginity «virgo intacta».

## FETISHISM

The fetishism is a sexual perversion where the erotic attraction is not for the partner but for a body part of loved person.

Fetishes are: hairs, eyes (even strabismus), ears, mouth (sensual or fleshy lips), calves, haunches, voice, all erogenous points that can favour the libido.

So we have a movement of sexual instinct, lustful on fetish; and only through this, abolished the anxiety, the heterosexual intercourse is possible.

There is also a rare form of AUTO-FETISHISM: as in some cases the maniac loves his right foot and not the left one or loves and take care of his hands in a very morbid way, so he must show and contemplate them.

## FLAGELLATION

This is a SADOMASOCHISM mania on which the sexual excitation and orgasm are reached during a FLOGGING.

Normaly is performed by a woman, but also a man can be an active partner in this pathological rapport. An old time saying «If you go see a woman don't forget the whip»; maybe the lashes was considered from the maniac a love proof. In these cases the masochism is searching for, the sadistic instead cause humiliations and pains in different ways.

## **POLYANDRY**

(Union by a woman and more men)

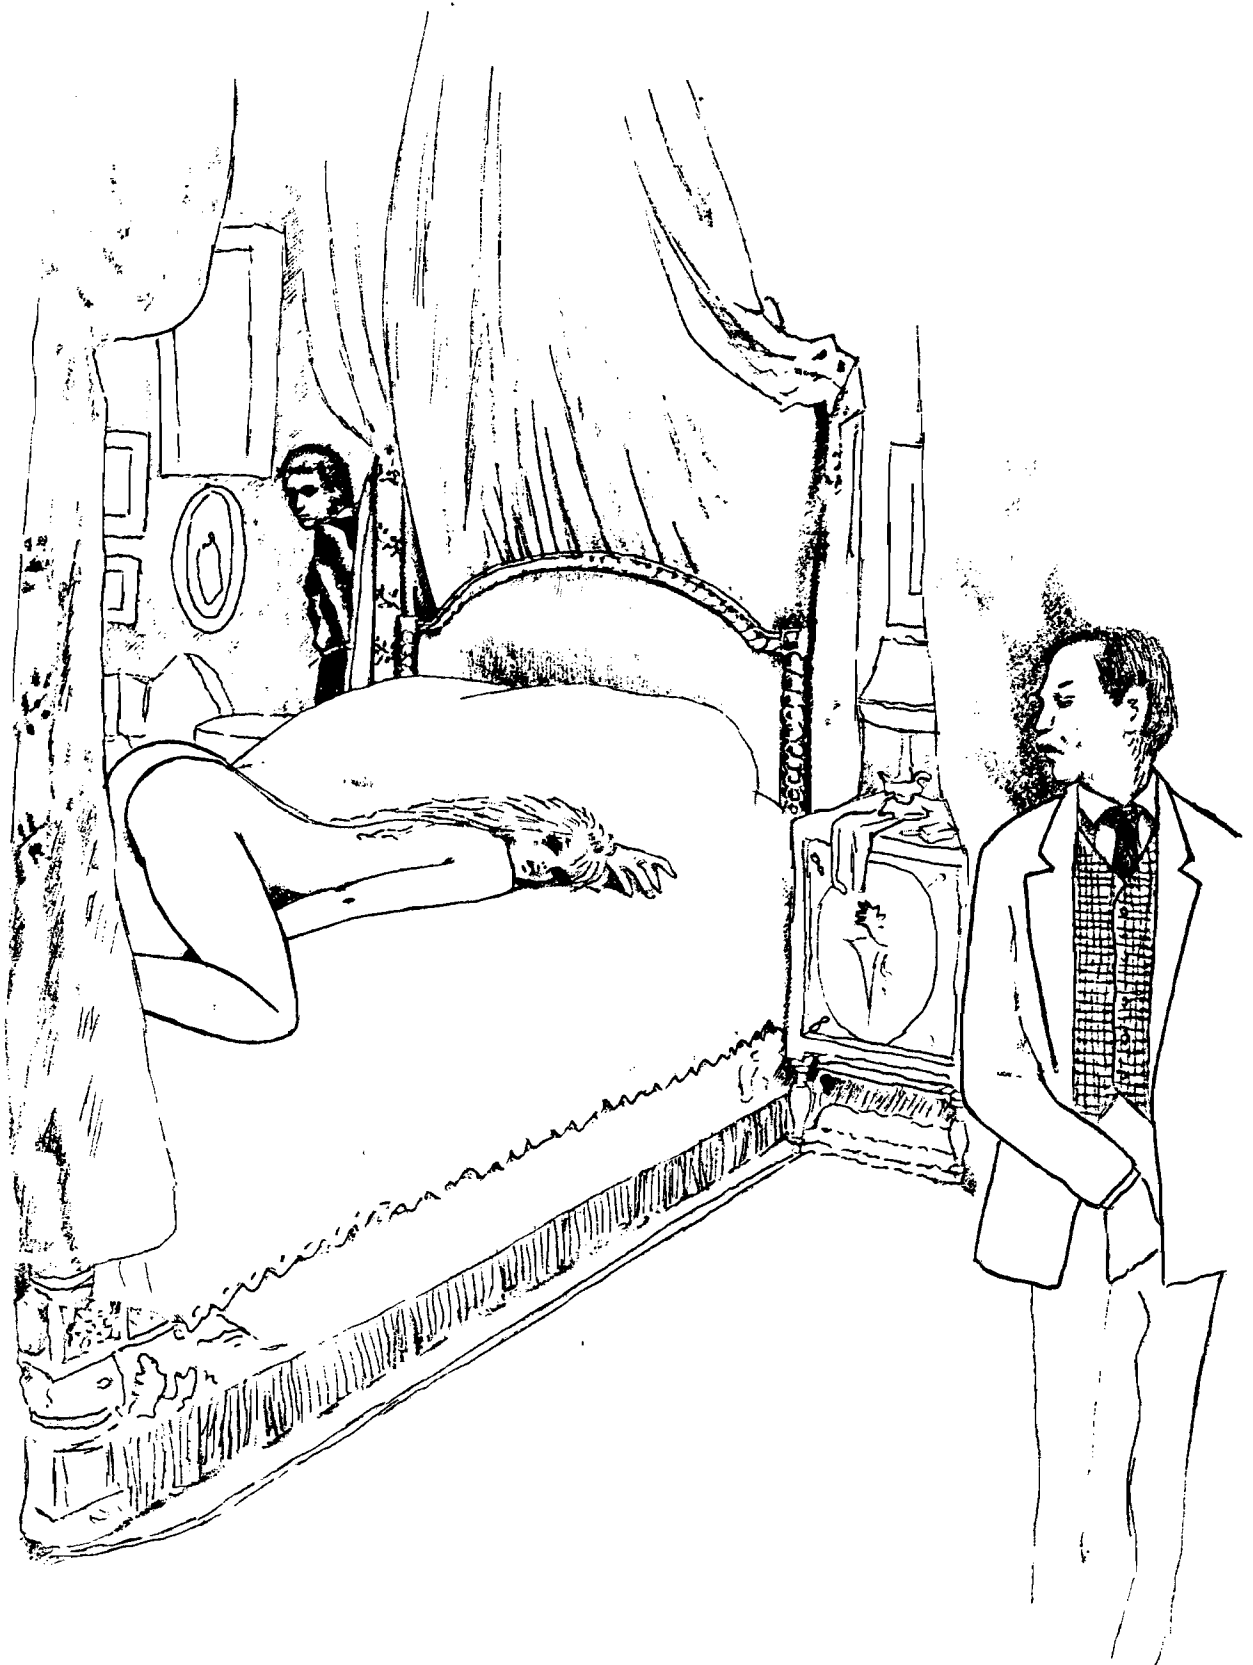

For the psychanalysis this became a mania because of person immaturity.

In the old Tibet was permitted a wife for many brothers because of women lack.

A woman can sexually satisfy five men:

a) with the vagina; b) with the anus; c) with the mouth; d) with the right hand; e) with the left hand.

This is the type of rapport the nymphomaniacs are looking for.

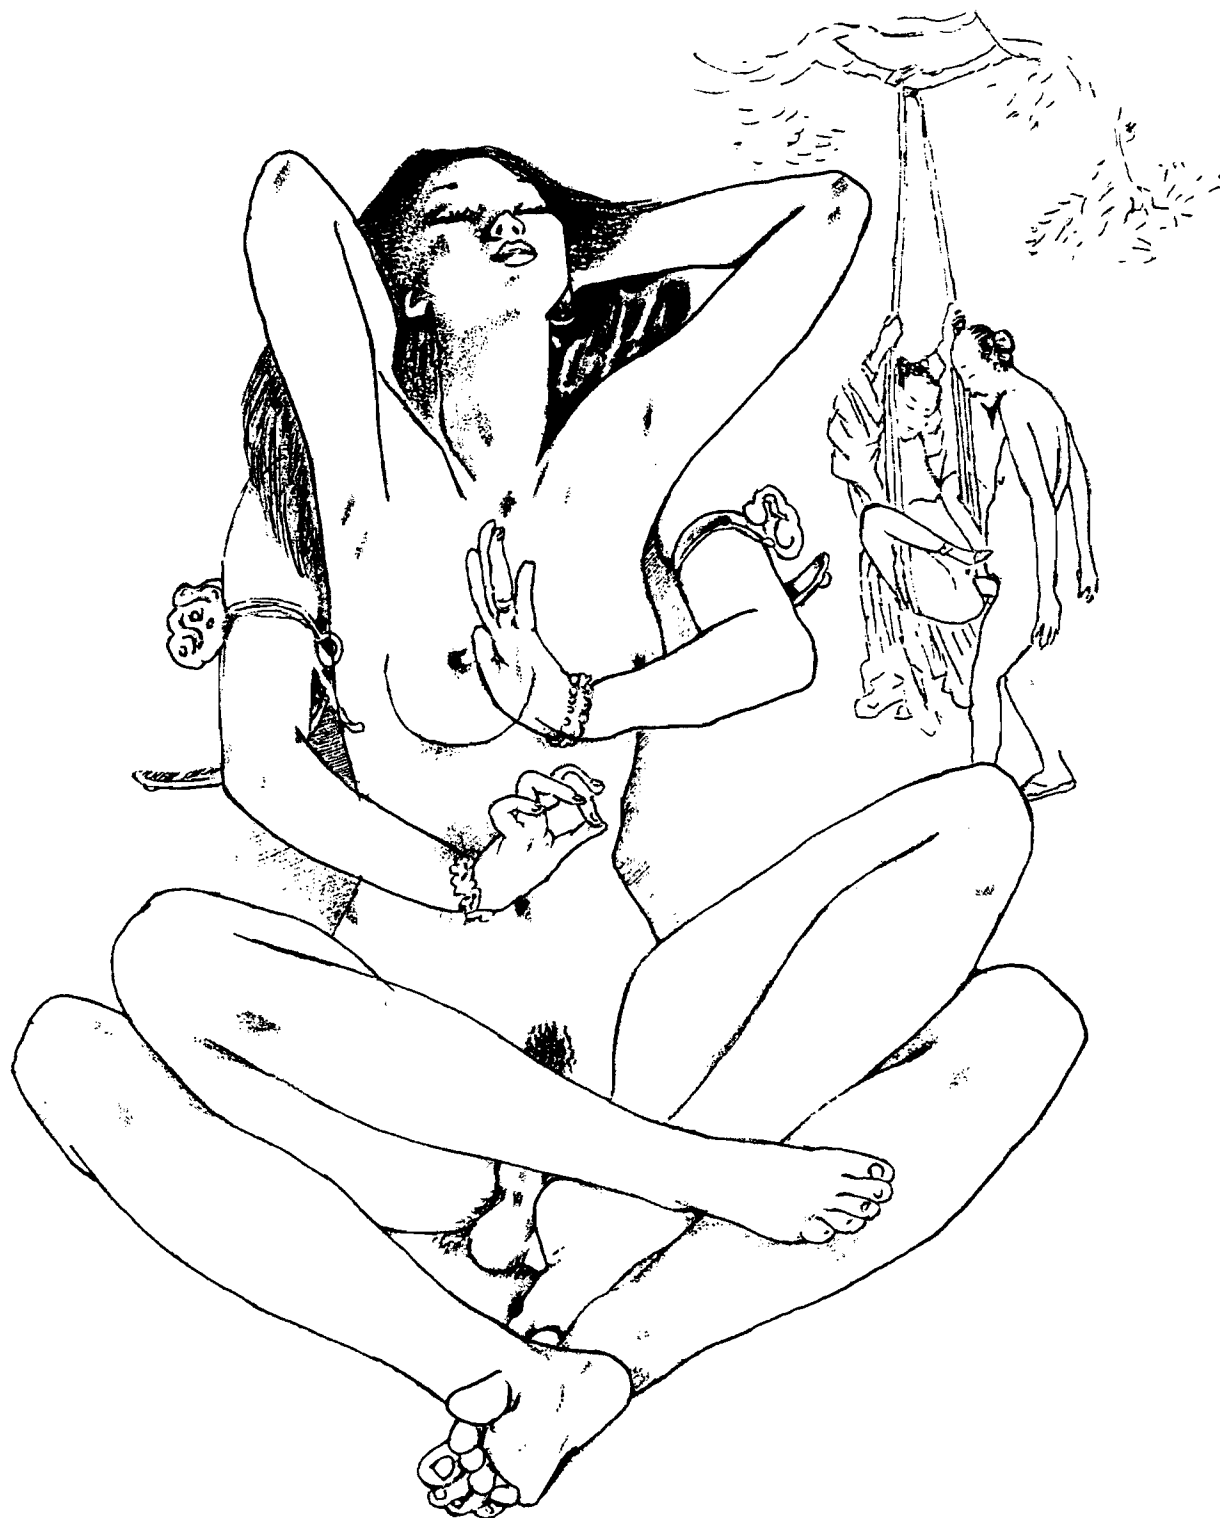

## ORIENTAL FASCINATION

In the Eastern World the sexual live has been always healthy and free from any aberration; as sadism and masochism, but immensely rich in happy variations of love act, in which the partners give completely to each others.

An important part of chinese alchemy, the NEI-TAN or «internal elixir», is a tied rapport with those sexual technics believed to lengthen the live and maybe to get the physical immortality.

«The only immorality is love lack».

# **HYPERTOPHIA**

(The vulva small lips)

Because of frequent erotic masturbations of perverse woman, can cause a considerable development of the vulva small lips.

This perversion was carry out in black Africa from some fetishist tribes (see the hottentot Venus in the Man Museum - Musée de l'Homme).

Also if rarely, the white maniac loves to deform the small vulvar lips.

So they can reach abnorm dimensions (from 3 cm to 8 cm).

**INCEST**

(from latin incestus, incestum)

Carnal union between persons of different sex but bound together of blood relationship that prevent the marriage.

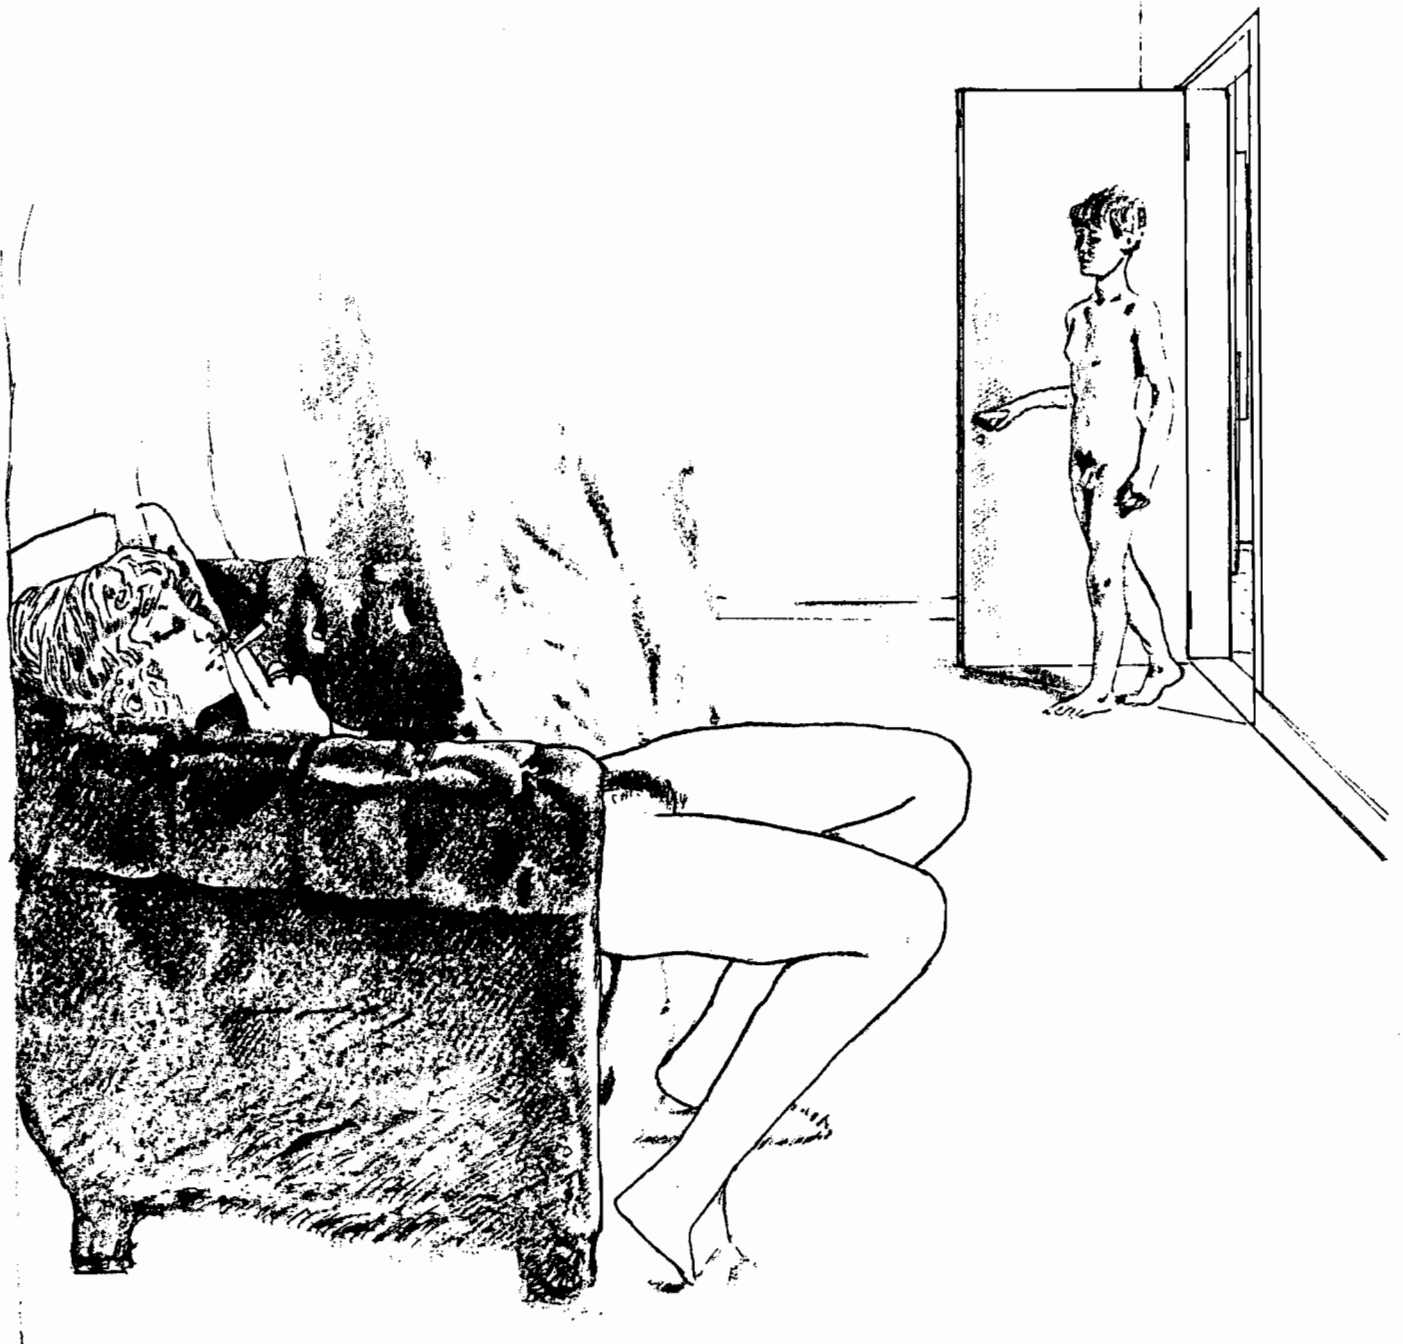

According to FREUD the origin of this «tabù» is to search in the prehistoric rivalry between father and sons for possession of mother or sisters.

All this supported by OEDIPUS complex (morbid love of son to mother), or ELECTRA complex (love of daughter to father).

So can be justify some neurotic situation on adult person. Is called «sororal» or «sisterly» the incest between brothers and sisters.

In the ancient Egypt society the incest was not an offence but pharaohs holy rule.

Today is condemned by law and church.

## SADISM AND MASOCHISM

For SADISM we intend «sexual violence practised on others». For pathology is the «pleasure realization and orgasm achievement through physical suffering or moral mortification imposed to sexual partner».

It can go from hits to murder, but sometimes sadism is only fantasy. Sadism is synonymous of aggressiveness.

As well as in sexual perversion we can have sadistic behaviour in neurosis and schizophrenia.

The psychoanalysis explains that as a stop or instinct regression at childlike level.

In a broad sense even the free cruelty without any justification or torment with words of others people till reach vexation is considered sadistic attitude.

## **SATYRIASIS**

(GREEK-SATYRIASIS)

Exaggerated, excessive, permanent male sexual appetite from morbid nature, that oppose to female nymphomania.

Sometimes appears after nervous or hormonal alteration.

Is to be considered perversion the continuous search for abnormal sexual relations.

It is not to be considered perversion if the over-excitement is only at desire level.

This excited male erotism can become pathological in same maniacal syndrome or under drug effect.

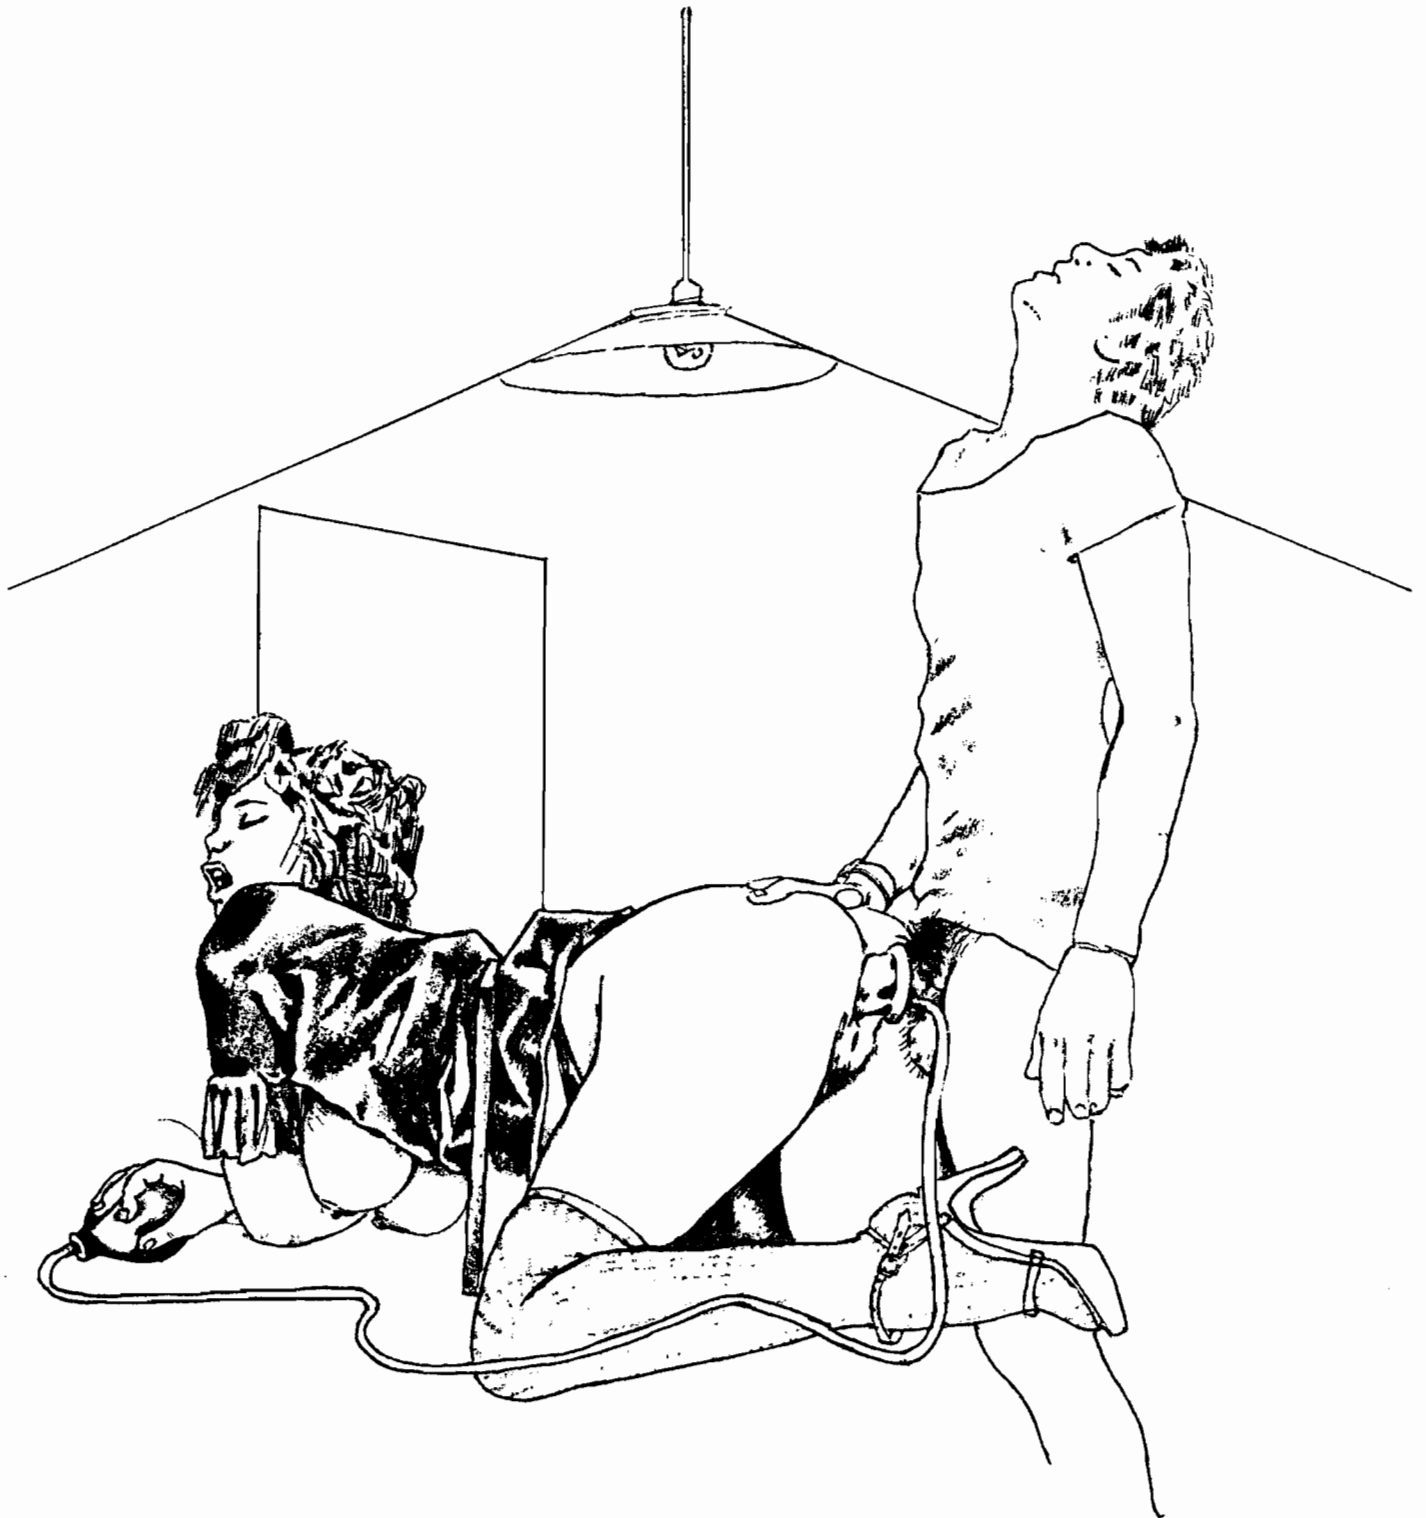

## MECHANIC EROTISM

The penis, also called membrum, phallus (french: pènis, verge); (german: penis, männliches) is male copulatory organ. It is an erectile organ capable of remarkable variation in volume, length and consistency.

The length of free part penis, when flabby, is about 10 cm, with a circumference of 8-9 cm; in erection can be 15 cm with a circumference of 10-12 cm.

The penis smallness, if under normal size, can cause in the neurotic subject a frustration that can lead to impotency.

There are accessories used by maniacs to increased length, dimension and hardness of penis. They are called erotic hardeners (Japan Kabutodama) and sometimes are recommended by doctors.

## LESBIANISM OR SAPPHISM OR TRIBADISM

Female homosexuality, that get the name from an Aegean island sea where poetess SAPPHO was encouraging her pupils to make love between each others.

Is not a perverse sexual behaviour, but looking for erotic satisfaction with same sex.

The lesbianism or sapphism have different origins, in olden days slaves bored for a long captivity or for a long love privation.

In same other cases, maybe for an excessive use of embrace, or immoderate lust so to keep sensivity only on external genital parts. So nun can gives hand to prostitute. A lot of subjects are bisexual (very few in male paederast).

The lesbianism can be symptom of neurorisis or psychic trauma or adolescence frustration.

in sketch

## MASTURBATION OR ONANISM

For long time an old belief said that the masturbation could cause physical and mental damage in young people.

For this wrongly interpretation onanism was believed responsible, weougly, of anxiety, depression, asthenia, cephalea particularly in young people.

While this «autoerotism» enter in sexual perversions only in menthal troubles. If continues in adult even if there is the possibility of normal sexual intercourse, is to be considered as pathological.

Because in childhood this is not a perverse act, parents is better to ignore it.

Instead is to be considered and pay attentions if in the child or teen-ager became obsessive till to disturb mood and behaviour.

## **MENSTRUUM EATER**

### **NOT MUCH DIFFUSED MANIA:**

the menstruation is a physiological phenomenon connected to reproduction function, cyclically present every lunar month on healthy woman from puberty to menopause, consisting in blood outflow of uterine origin that show up front genital organs.

In some unusual maniacal cases can be the reason of erotic excitation for orgasm achievement.

Is well-knowm that the woman during menstrual period has moments of great erotic sensitivity.

## MALE HOMOSEXUALITY OR PAEDERASTY

Is the spontaneous tendency to direct one's own erotism to a same sex person.

This individual presents an inversion of erotic instinct even if his sexual organs are normally conformed.

In couple rapport the paederast has and assume a passive part, therefore feminine.

It is included among perversions also if today has been tried to included it in normality. Under social profile can go from acceptance to institutionalization, while in some States is penally punished.

This ardent passion for same sex once was more frequent in warm country, where for climatic conditions was normal to be nude. So they try to justify it for those men whose women because of their tissues flaccidity reached desolating diameters.

**POLYGyny**

(UNION OF ONE MAN AND MORE WOMEN)

Pluralism, said also group's love, neurosis form leading to perform orgasm in more than two.

Known as «pink ballet» is the apposite of the lone «auto-erotism» or masturbation.

The man rapport with more women is very unusual because in feminine nature possession is prevalent.

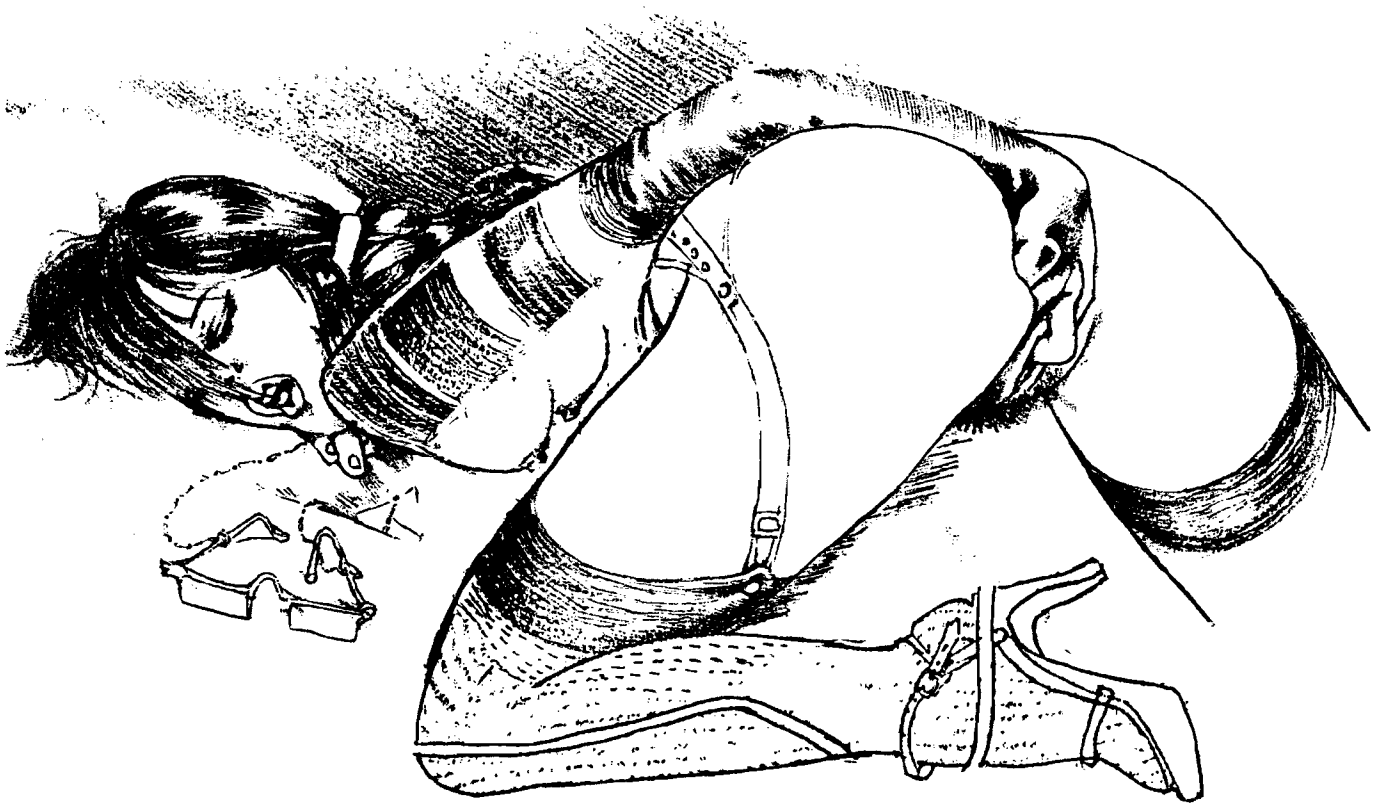

## RECTUM MASTURBATION

Is consist in finger introduction in anal orifice till obtain sexual pleasure, said also «orificial erotism».

This perverse act is practiced whether from men or women to cause with this double masturbation penis swelling up in men and clitoris in women.

Woman introduce thumb finger in her anus and forefinger in her vagina, so she can massage in that way the clitoris and vulva.

There are also some exasperated cases of this perversion with the introduction, after abnormal sphinter dilatation, of various things and even the abominable, reciprocal, introduction of forearm.

**MASOCHISM**  
(L. VON SACHER-MASOCH)

Masochism can be defined as a sadism reflected on own person.

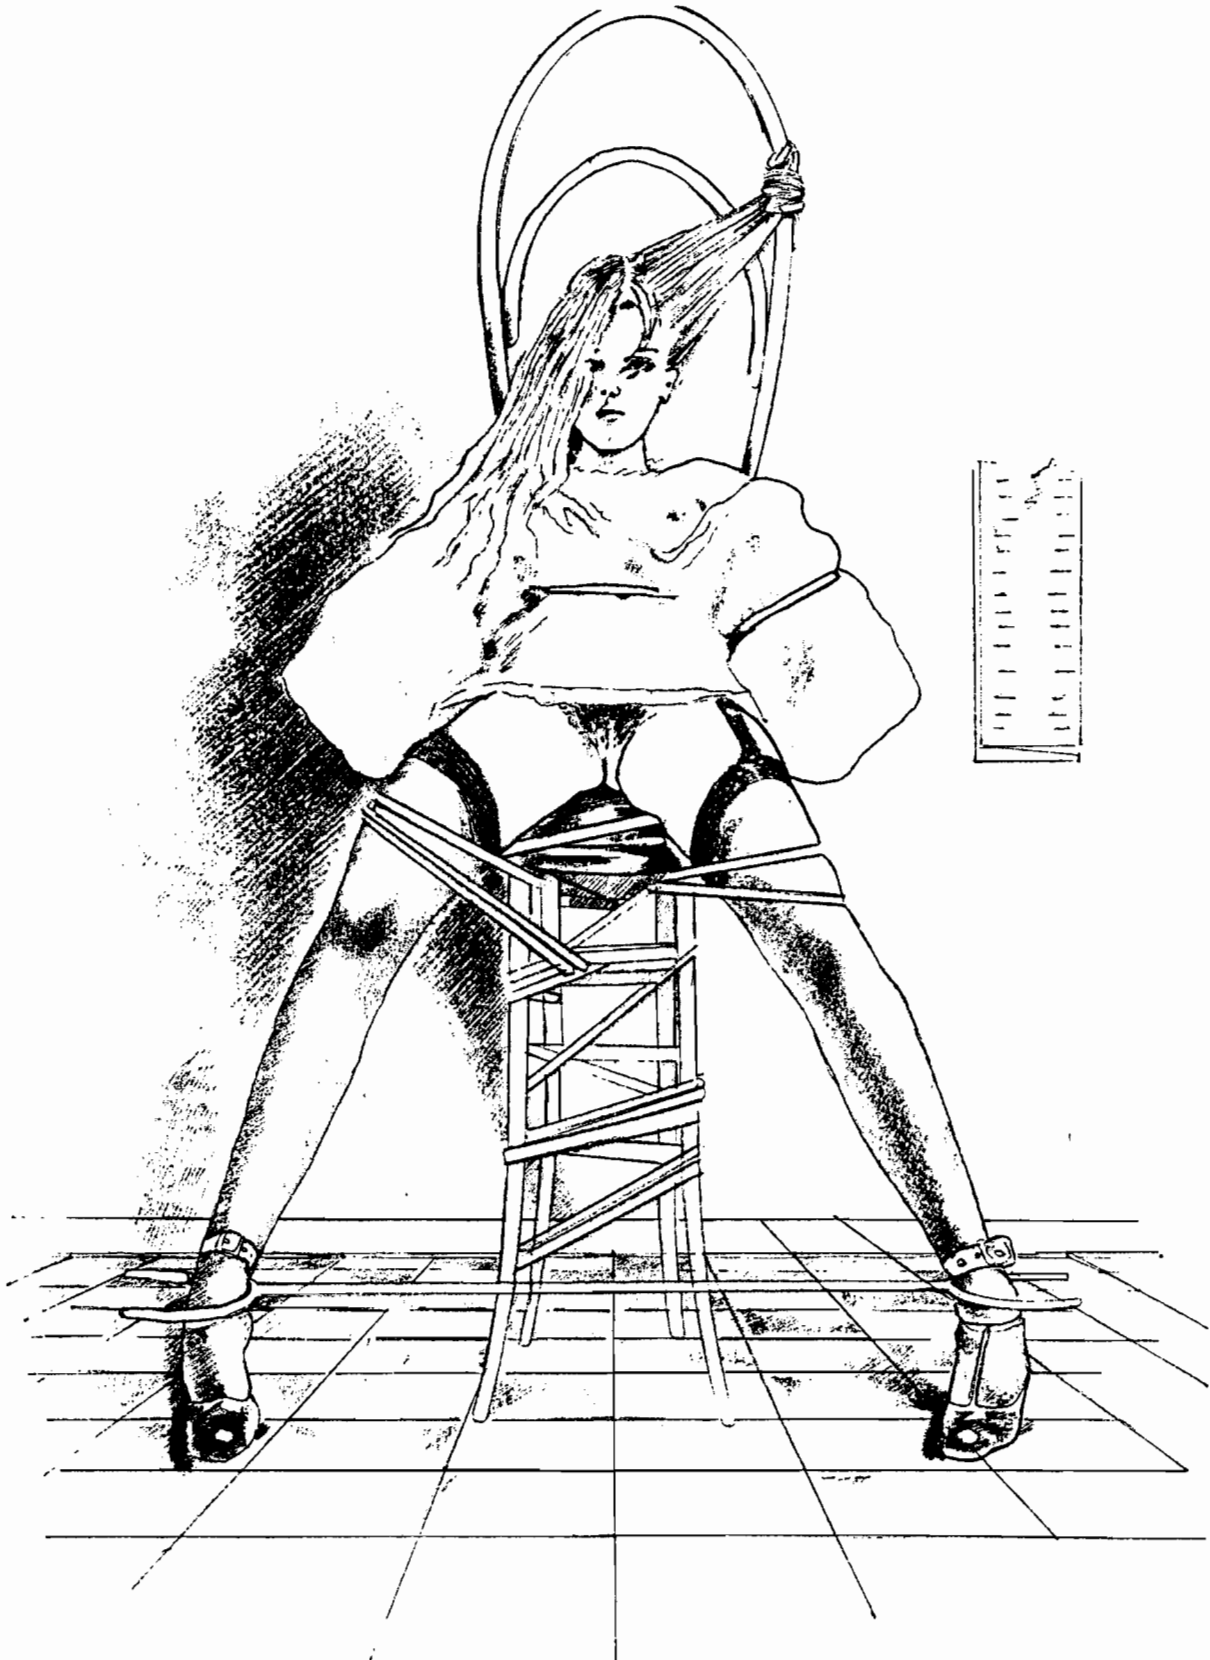

The SADO-MASOCHIST couple, physical and moral of one and passive masochist submission of other.

It is to be considered as a psycho-sexual perversion supported by a blame or punishment feeling, often unconscious.

It is a sexual perversion with erotic satisfaction is linked to suffering and mortification suffered from the subject.

It can show up with physical pain through punctures or beatings and moral mortifications.

The psychoanalysis has extended the masochism knowledge to moral one more far than the sexual perversion where the subject, because of an unconscious blame feeling, assume victim position.

## NYMPHOMANIA OR UTERINE FURY

Excessive, incontrollable female sexual lust, with continuous look for new partners because of incapacity to reach orgasm.

It is an obsessive perversion, cerebro-sexual erotism, unsatisfied satisfaction with always new stimulating experiences.

It can come up in maniacal syndrome or under drugs effect (Amphetamine).

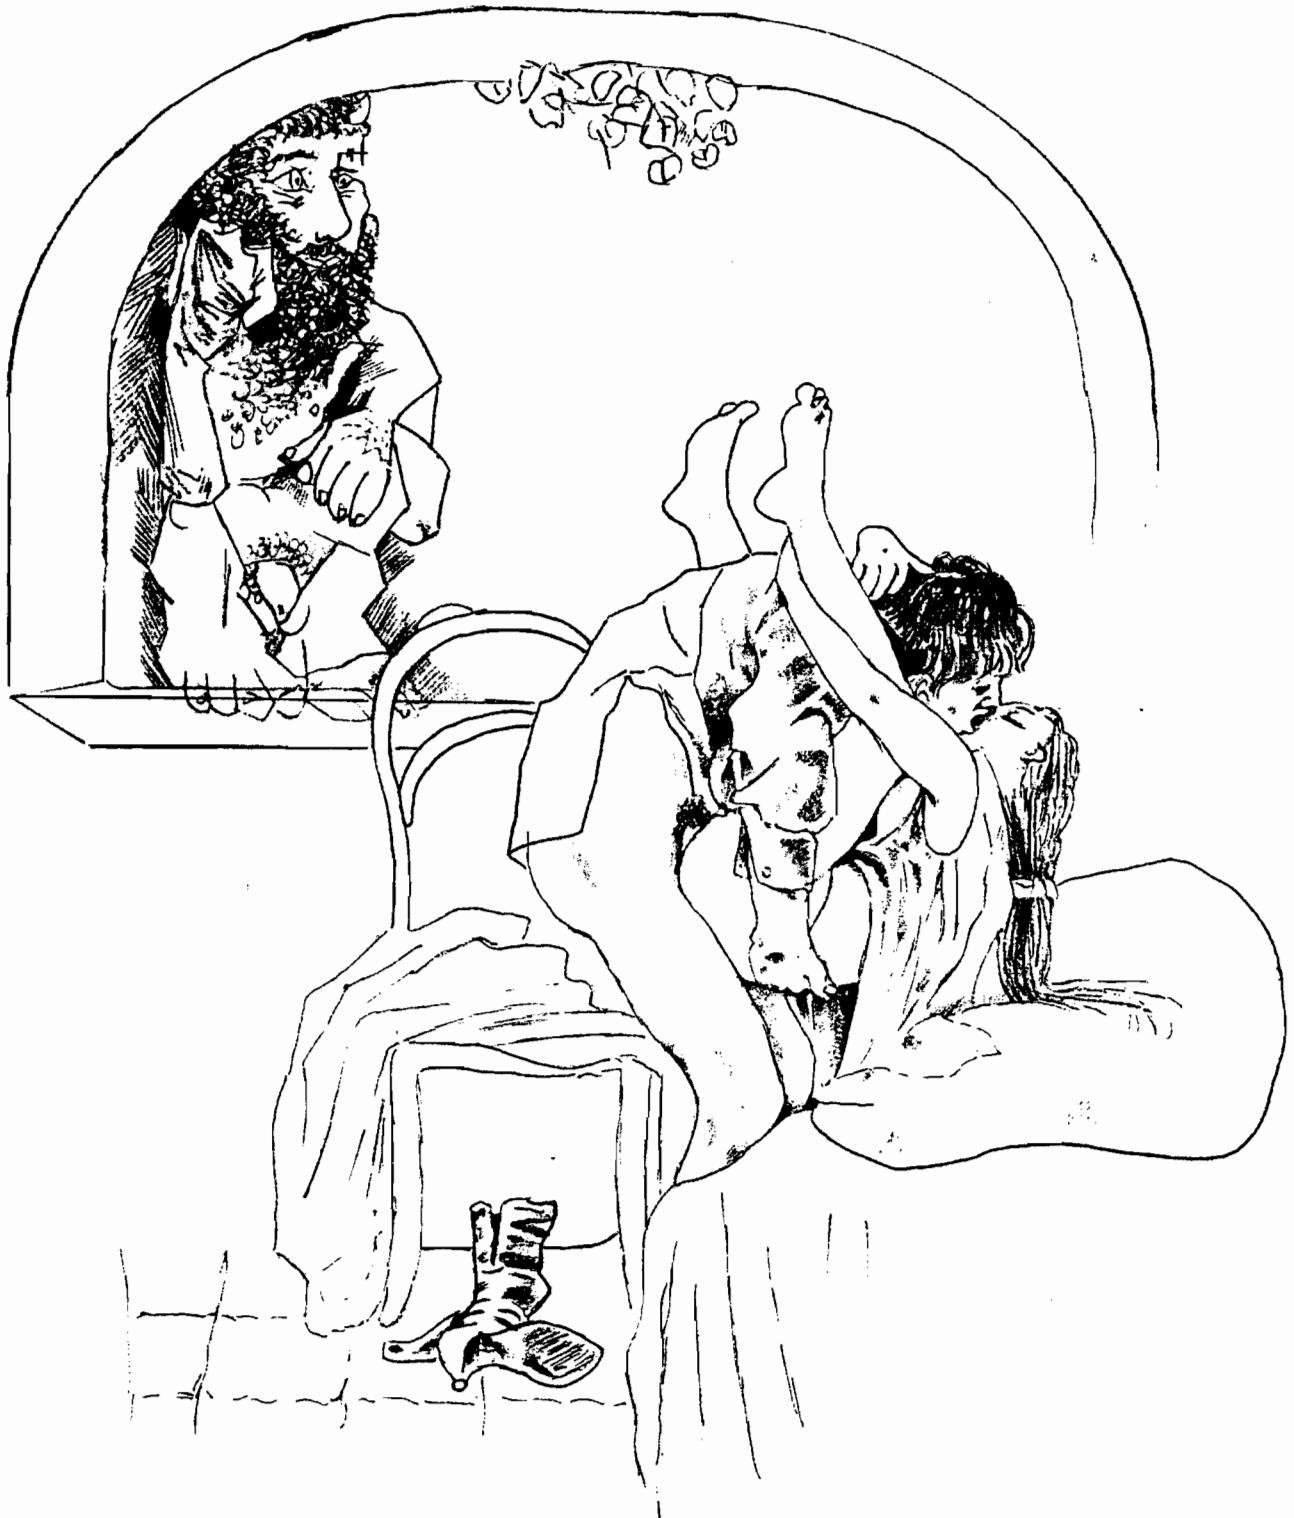

It can appear also in some others mammal females.

It is pathologic when is due from endocrine disquilibrium or psychic sphere or after administration of female hormones (oestradiol).

In man is called satyriasis.

It can be explained because of partner impotency or because for moral or educational conflicts.

It can lead to exhibition or prostitution or masturbation. The rich women pay their lovers. After menstruation is present a more physiological erotic sensivity.

### LESBIANISM, SAPPHISM, TRIBADISM

In this erotic form in normal that ofttern one woman assumes male attitude and not only during loving affair, but also in hair cut, male movements, while the other, assume a female passivity. In these cases we deal with immature personality the weak one unconsciously rely on the more virile and active partner.

So we can see beautiful and blooming women feeling glacial indifference to male contact, in spite of ardent wish to same sex; in this way they vent their uncontrollable sexual appetites with labial and lingual tecnics, caresses, licking and sucking of nipples and clitoris. They often use aphrodisiac articles.

## **SMEGMA MANIAS**

It is a white substance similar to wet soap, that in man is in the balano-preputial furrow and in woman between small lips and clitoris.

This is due to desquamation of genitalia ephitelial cells.

If the SMEGMA is not removed with a simple washing it tend to putrefy and ferment with unpleasant smell.

For the sniffing sexual maniac instead is a erotic source, he likes the smell of decomposed smegma.

Somebody said that even Napoleon was praying his mistress to don't wash till his arrival.

## URETHERAL MASTURBATION

A widespread mania.

Can happen that during or after coitus the male partner urinates wetting the urethra and vulva lips; while the female wets with her urine the scrotum and pelvic part of partner.

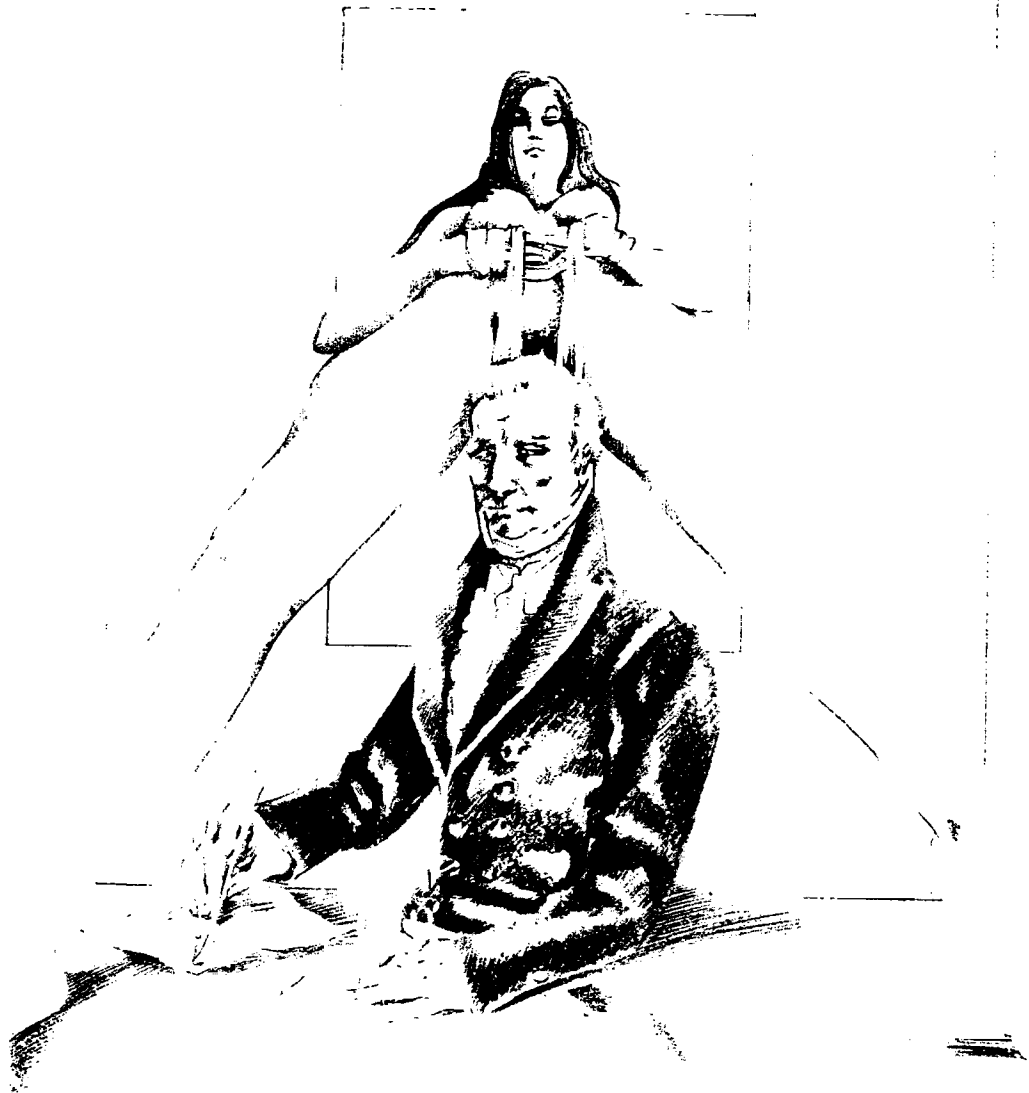

**VON SHACHER LEOPOLD MASOCH**

German writer (Leopoli, 1836  
Lindheim-Hessen, 1895)

He became famous for some novels where he described those sexual perversion form that get the name of:

**MASOCHISM**

## ZOOPHILIA OR BESTIALISM

Erotic impulse toward animals or sexual report identified in vaginal or anal coitus or with masturbation.

Very frequent in men, less in women, especially shepherds or nomads, that for all life live with animals, without any possible women report.

Zoophilia is always a sexual solitude expression, verifiable in some hypersexual psychopaths with scarce or nothing affective sense.

According to psychoanalysis bestialism goes back to childhood when erotism awake in the adolescent with affectionate caresses to domestic pets.

## **SADO-MASOCHIST**

In this perversion can enter the erotic caressmakers.  
These people wander on buses, trains or cinemas and get erotic satisfaction touching breasts or bottoms.  
The victims rarely accept these treatments.

## **AUTO-CLITORIDEAN ORGASM**

This mania goes back to childhood, it consist in clitoris manipulation, this one is a small erectile organ placed in the front part of vulva.

Such maniacal masturbation practiced to obtain orgasm is found in those women where a natural report with male is forbidden.

**FREUD SIGMUND**

Physician-psychoanalyst

Freiberg: 1856 - London: 1939

The psychoanalysis father.

He was the first one to help the patient to free himself from complex and neurosis.

## **AUTO-EXCITATION**

It is an unnatural excitation that the impotent or neurotic has recourse with different methodologies.

The maniac in this case uses instruments or makes use of drugs as cantharis, cocaine, hashish.

He also makes use of aphrodisiac foods as celery, pepper, patrika, truffle, crustacea, esotic fruits etc....

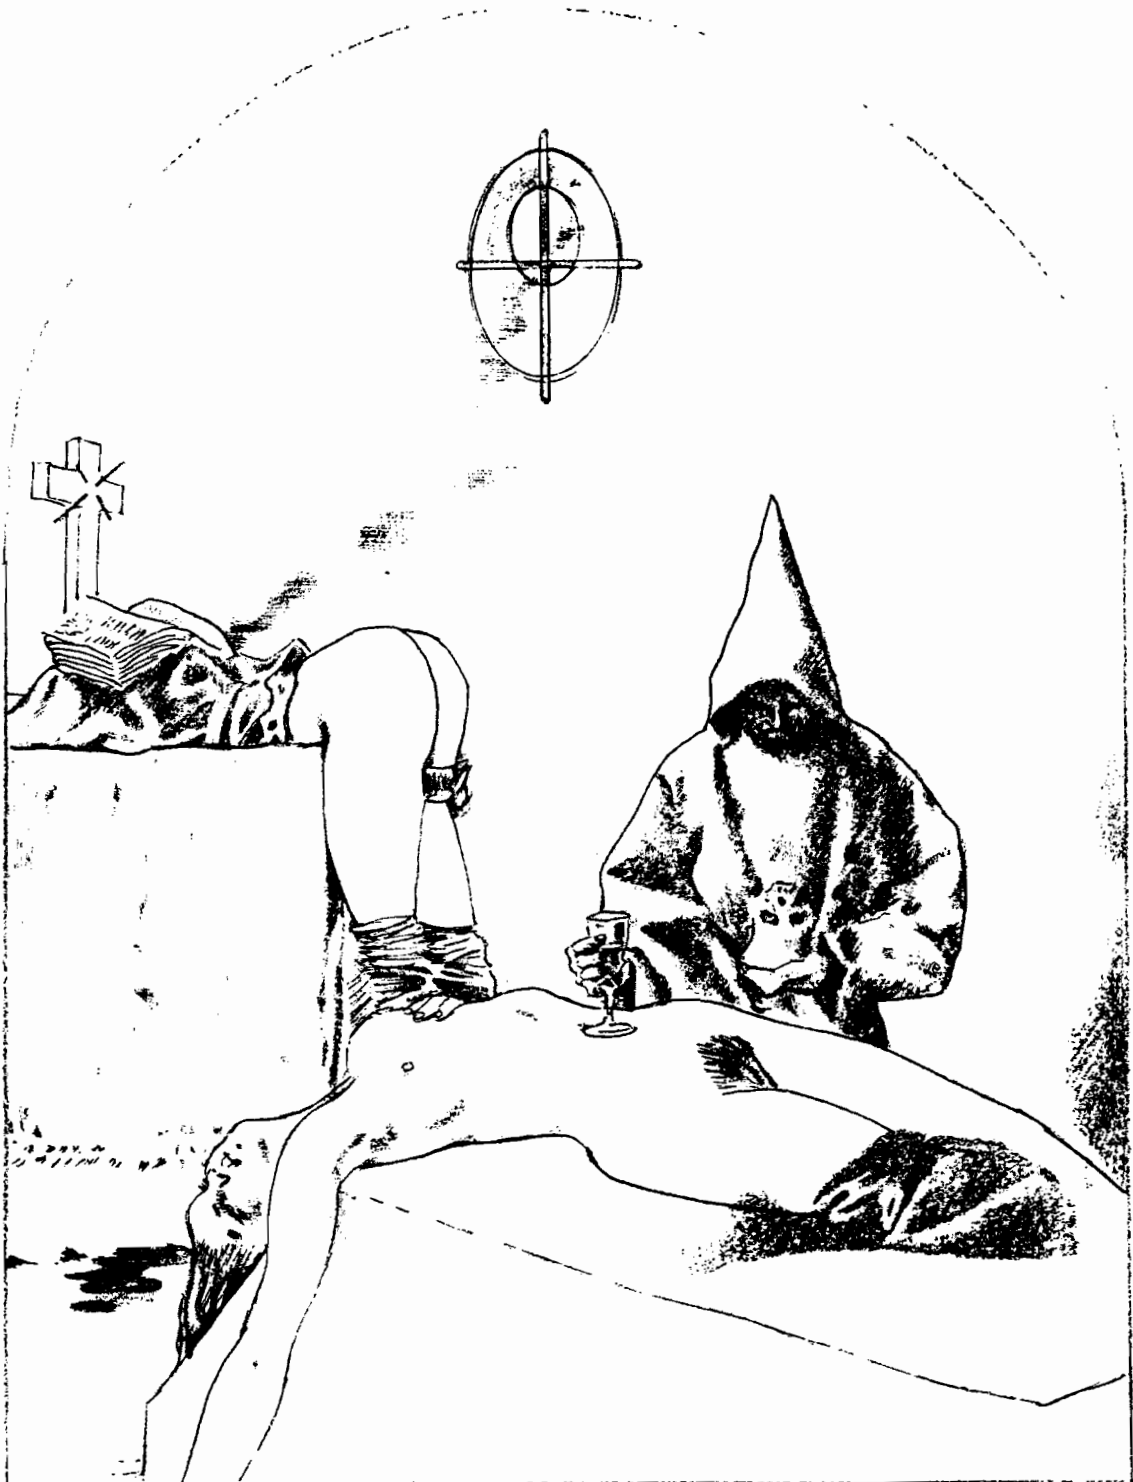

## **BLACK-MASS**

It is considered as a reactant against the church oppression.

During these obscene rituals the holy water is replaced with urine, said «devil urine». Rosary is said with swears and the host is replaced with vegetable.

Aphrodisiac potions are given to these followers and are stained with menstrual blood or sperm.

All of this is glorified with rapes and orgies.

## NECROPHILIA

Widespread sexual perversion that goes back to old times. These maniacs are used to have sexual intercourse with corpses.

According to ERODOTUS the egyptians had make use of embalming to restrain necrophilia.

Somebody says that P. Ardisson, necrophile, Provencal sexton beetle (1901) was used to have intercourse with dead women. Seem that also HEROD had abused of his dead wife for many years.

Finally Joan, Castile's queen she travelled, across Spain, for few years with the corpse of her husband:

Philip the Fair.

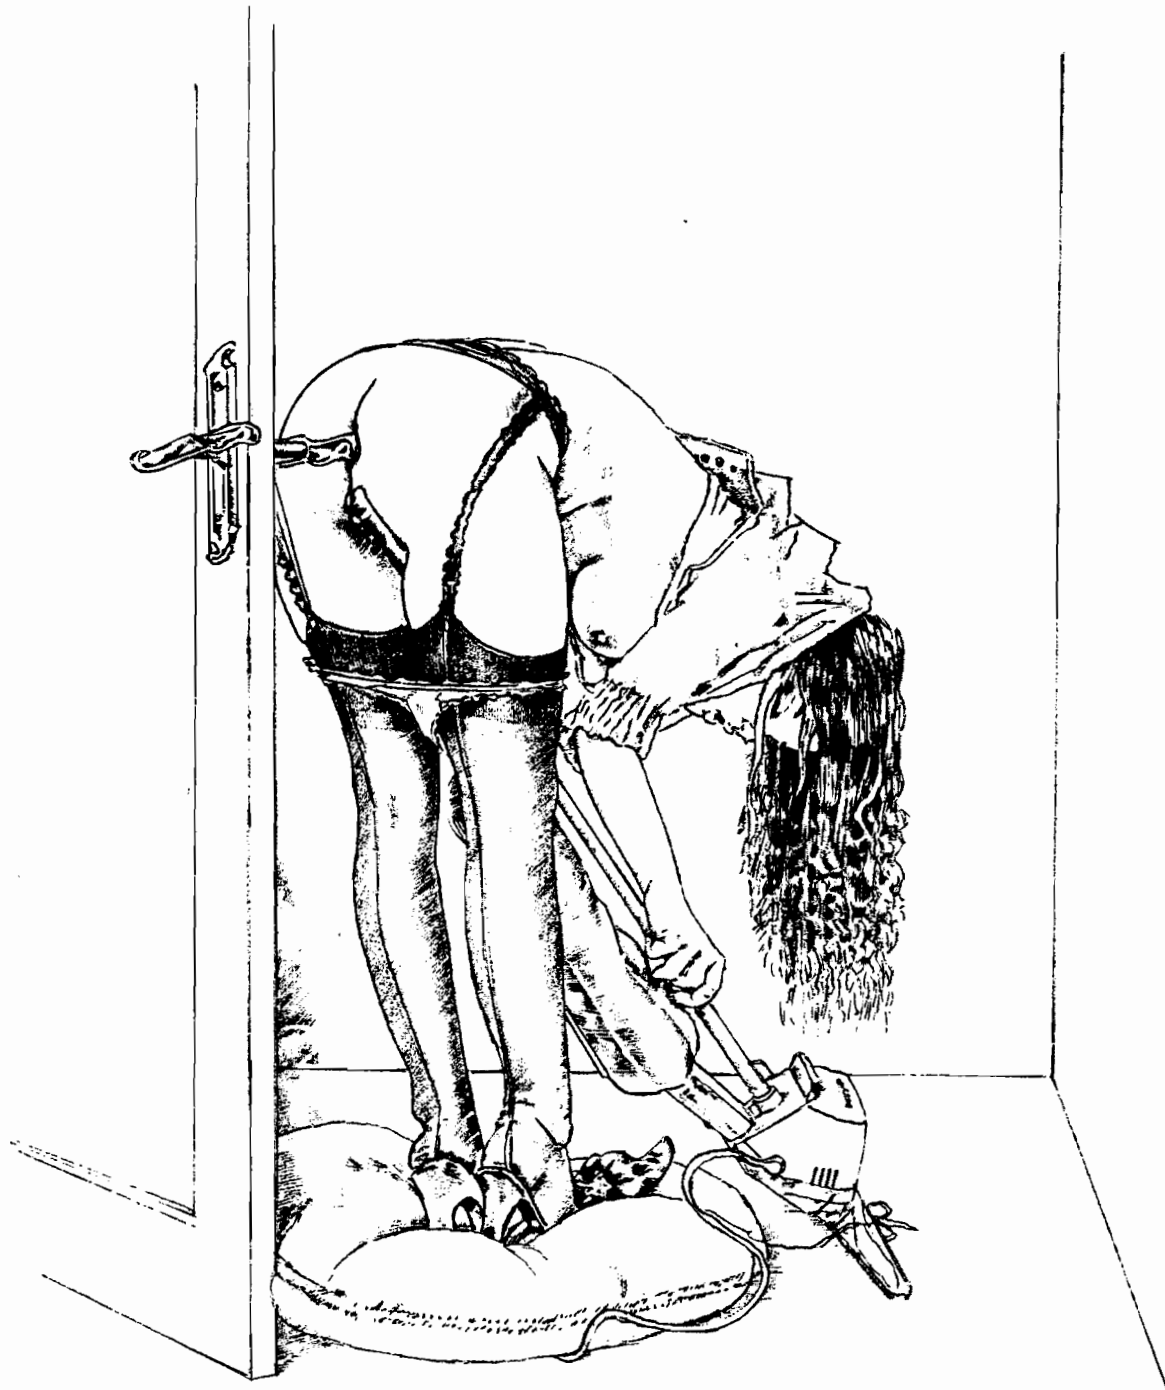

**APHRODISIA**

Impulse and erotic excitement in woman with inhibition lack in sexual report.

Such mania often is distinguished for the incapacity to get the orgasm.

It can be find in schizophrenic syndrome or for drug effects (amphetamine).

## INSTRUMENTAL MASTURBATION

In the old GREECE and in the orient was already well-known the use of instruments suited to replace sexual orgasm (vagina and penis).

While for penis is difficult to insert foreign bodies, in vagina instead, that is a warm and humid cavity, is very easy whether to get or produce erotic pleasure. This is a widespread mania. All over the world now exist mechanical vibrators with electric battery.

**SADE (Marquis de . . . )**

Erotism prophet.

He spend his life between mental home and jail.

We writes a lot of erotic short stories on whose he tells every sort of torture, aberration and sado-masochist fantasies.

(EN ALPIONSE FAN  
 DE SADE

## NARCISSISM

The legend says that handsome Narcissus was unable to love. He refused also nymph ECO that kills herself for great sorrow, but before die, ask nymph Nemesis to revenge her; so Narcissus looking at himself in springwater and finding himself so handsome, in love with his body, tried to kiss his reflected face and miserably drowned.

NARCISSISM = Love to himself

PRIMARY NARCISSISM: in child about 2 of age (said oral phase) all is polarized on oral pleasure and foods, so all libido is concentrated to his body.

In secondary period; the libidinal strength has adhered to some external objects of love but inexorably goes back to themself.

If exasperated can be distinctive of neurotic, psychopathic, immature and egoist personality.
